Editorial AS WE SEE IT

All of us in this country are quite accustomed to hear half-truths, fuzzy generalizations, and wholly incredible claims issue from the mouths of candidates for political office. We have grown to feel that such speakers should be permitted a rather sweeping "poetic license." Few of us have, therefore, been particularly disturbed by the often somewhat absurd statements being made in the Presidential campaign now getting under way. It seems to us, however, that Senator Kennedy the other day stepped rather over the line of permissible foolishness, the more so since what he had to say was so artfully designed to influence the working men and women of this country-influence them by a means and in a direction neither of which can well be defended by any reasonable standard.

We refer to the Labor Day address delivered by the candidate in the city of Detroit. The flexible standard of sensibleness and good faith allowed candidates extends, of course, to their use of statistics. In point of fact so many unwarranted conclusions are being constantly drawn from sets of figures themselves often seriously in question that ordinarily we should feel much inclined to pass over the imaginative inferences of candidates for political office, but when a gentleman who would have us place him in the highest office of the land has the effrontery or naivete (whichever it is) to tell us that "with an average rate of growth in this country every working man in the last eight years would have received \$7,000 more than he has received," the time has come to call a halt. It would in a sense be interesting to know how Senator Kennedy's statisticians came up with any specific figure of this sort—just as it would be interesting to know how so many mathematical neophytes of the past came to suppose that they had found a way to trisect an angle or to square a circle.

Statistical Nonsense

No one who has cut his eyeteeth would take the trouble to study the methods by (Continued on page 28)

Achieving Real Economic Growth Without Losing Our Way of Life

By James F. Oates, Jr., President, The Equitable Life Assurance Society of the U. S., New York City

In agreeing that economic growth will require more Federal spending, Mr. Oates specifies the kind of spending it should consist of and says it should be coupled with cuts in wasteful, non-essential programs. Growth is said to require tangible investments embodying new, modernized plant and equipment as well as intangible investments in education, research and development. He calls for a reorientation of Federal tax policy to encourage savings and investments.

Growth is a fact of life. It is, indeed, a requirement of life. Children are appraised in terms of physical and mental development. Mature men and women soon realize that the brain is a muscle

and must be exercised so that it may grow in perception and power. All of humanity has been enjoined by the Divine Being to grow in spiritual motivation, in comprehension of brotherly love (and oh - how much this is needed) and in the service of the Kingdom

of God.

We know in the busy streets of daily life that all living organisms must either grow or slowly perish. This is particularly true of the secular institutions conceived and built by man, such as the State, and the business corporation. In

this shrinking world of instant communication and easy access, people are multiplying rapidly and they know more about how to live and how to kill than ever before. In this setting the monolith Russia has raised on high the ugly and age-old challenge of materialism, the flaming faith in the dictatorship of the proletariat and the passionate

declaration of war (cold and hot) against the dignity and sanctity of the individual man.

If we are to succeed in meeting this challenge, we must, of course, be strong; strong in faith, courage and determination, as well as in the full range of military and economic power.

I invite attention to an indispensable ingredient of power; namely growth—economic growth—and as to what measures should be taken by our nation to assure the continuation of such growth.

Some of the proposals offered for accelerating our growth rate demand with vigor and considerable persuasiveness an enlarged role for the Federal Government. Many who oppose this view think that such expansion would lead to an obnoxious increase in the Federal Government's direction and control over our way of life and thus threaten the sanctity of individual freedom. The attendant controversy has divided our people, has stirred them to heated political debate, and has called for a basic re-examination of our deepest convictions and attitudes with respect to the role of government in a free enterprise system. of government in a free enterprise system.

The controversy over how to achieve a faster growth rate is timely, real and important. It is one which we should all take seriously — for the solution we choose may well be one of the most critical decisions we shall ever be called upon to make in our lifetime. But in seeking a solution make in our lifetime. But in seeking a solution, let us remember that growth is a means to an end and not the end itself. Economic opportunity for all, the dignity and rights of a free man, the enlargement and ennoblement of an individual's life purpose—these are the real goals to be sought by society. These are, therefore, the true objectives of economic growth. We can not destroy such objectives in the name of achieving economic

As we review the record of these recent decades there is a noticeable drift (Continued on page 28)

Outlook for Rebuilding Savings via Life Insurance =

By Dr. James J. O'Leary*, Director of Economic Research, Life Insurance Association of America, New York City.

In directing the life insurance industry's attention to the "great opportunity" now present to reverse the slowing down in the flow of life insurance savings, Dr. O'Leary explains why "there is no reason today for . . . [being] backward about selling permanent cash value contracts." The insurance industry's economist probes the reasons for decline in savings through life insurance medium; discusses the implications of this for economic growth; and deplores attempt to force faster economic growth through expanded Government spending and easy money.

It will perhaps be helpful to have words, during this half century

(1) During the past 60 years the American economy has enjoyed an unparalleled expansion; (2) This has also been a period of spectacular growth of the life insurance business, as measured by the accumulation of saving through life

James J. O'Leary

insurance; The productive investment of life insurance savings has contributed enormously and in many ways to the economic growth of the country; (4) In the past several years, however, the pace of tury has been unparalleled in any saving through life insurance has slowed noticeably, for various reasons that will be discussed; can we explain the capacity of the (5) This slowing down in the flow American economy to grow so of saving through life insurance vigorously when growth has been has grave implications at a time so slow in most other countries? in which the United States sorely There are, of course, many reaneeds an accelerated rate of ecosons, most the most obvious being nomic growth financed soundly the abundant natural resources we out of a rising rate of saving by possess. High on the list is the the American people; (6) To play fact that we have been blessed

The Economic Growth of the United States

people. It also has been the re-

tive role in combatting inflation-

ary policies.

In beginning our consideration of the role of life insurance in an expanding economy, it will be useful first to review briefly the economic growth of the country in the past several decades. For lack of a better measuring rod, the economist employes the annual estimates which have been developed of the ground assistantial part of their income each year and make it available for the production of capital goods. The heart of the product of the gross national product of the United States. The term "gross national product" ability of savings to finance the expansion of our productive capacity. Economists who have during a given year.

Fifty years ago, in 1909, the GNP of the U.S., measured in terms of the value of the dollar States has, therefore, been our in 1959, amounted to about \$117 capacity to develop means of savbillion. By last year, GNP had ing by the people which have prorisen to \$480 billion. In other

a brief review, at the beginning, the total value of goods and serv-of the points I shall endeavor to ices produced annually in our bring about. These are, as follows: national economy, as measured in terms of a dollar corrected for changes in the general price level, rose over 400%. On the average during this period the annual rate of increase in our national output (again in constant dollars) was about 3% compounded annually. Because of the increase in our population during the past 50 years the rise of GNP on a per capita basis was considerably slower. Again in terms of the 1959

value of the dollar, GNP per capita rose from about \$1,295 in 1909 to \$2,700 in 1959. In other words, GNP per capita just about doubled during this period, with the annual rate at about 1.5% compounded. Despite current concern that

our national economy is not growing fast enough, the record of our the American people; (6) To play fact that we have been blessed its part in faster-growing national with a highly stable system of economy, our business now has rederal, State, and local governthe responsibility to redouble its ment which has provided a favorefforts to sell life insurance as a able environment for economic means of saving by the American growth. Our economic system has encouraged individual initiative and the desire to get ahead. It has means of saving by the American sponsibility to play a more effecencouraged inventiveness and innovation, risk-taking, and the spirit of competition, which are the driving forces of economic growth.

to save a substantial part of their developed of the gross national process of economic growth in all the goods and services pro-studied the growth of this country duced in the national economy are agreed that the basic factor restricting growth has been the limited supply of saving.

The Gillette Company

By Dr. Ira U. Cobleigh, Enterprise Economist

Viewing the stock of a company famous for its mass production, extensive advertising, world-wide merchandising, repeat sales, and high returns on invested capital.

or Hemingway and the current tiveness of Gillette manufacturing spate of beatniks, bearded laddies and sales techniques the Toni inare almost as rare in our affluent vestment was all paid off within society as bearded ladies. Impor- 4½ years. The "Toni," "Bobbi" tantly responsible for this smooth- and "Prom" home permanents shaven appearance of mankind, is have prospered except during a the Gillette Company which, in style 1959, produced over 2½ billion 1958. blades for American shaves, and Mix" Toni Home Permanent, and sold more than 3 billion blades in a broadened line of hair sprays 119 foreign countries, including all the "Free World" and several curtained countries as well. That's sion has gone forward and it a lot of blades and Gillette is quite a company. It sells twothirds of all the razor blades bought in the United States and Canada and has increased (by about three-quarters of 1% annually) its share of the domestic market since the end of World War II. Three product trade names are used, Gillette, Valet and Tech.

Actually Gillette has three main product lines: (1) shaving products including razors, blades and shaving creams which deliver about 65% of sales; (2) cosmetics analysts, made money with Paper and hair preparation products for women (the Toni Division), which account for around 26% of sales and (3) Paper Mate ball point pens acocunting for the remain-

Shaving Products

The Gillette Safety Razor Division had a record year in 1959. Sales of its razors, including the new, widely - advertised, adjust-able one, blades and Foamy Shaving Cream all expanded to new highs and the outlook is still brighter for this year. After about five years of intensive research Gillette introduced this past January an amazing new blade called the Super Blue Blade. While this Gillette in the broadcasts of many brings a premium price (10 for major athletic events, and King 69c instead of 10 for 49c) it has Gillette's face would be instantly proved a terrific seller and is recognized by tens of millions of stocked by 99% of all American drug stores. It affords a smoother, closer shave than any of its predecessors, and is most attractive from the Company standpoint in that it costs but little more to produce than the standard blade although it commands a premium retail price. The expanded sales, and higher profit margins created by the Super Blue Blade are expected to propel Gillette earnings to a new peak for this year. And that possibility should continue rangement with the Upjohn Comto interest present and potential shareholders.

Toni Division

The Toni Company was pur-highly probable. chased in 1948 for \$20 million. Investors who Due to the rising popularity of Gillette common for any length of Murphy, Vice-

Except for an occasional Castro home permanents, and the effecchanging lull in 1957 and Since the addition of "No (Adorn) facial cleansers, deodorants and shampoos, the Toni Diviracked up its second best year in 1959.

> Paper Mate was acquired in the Fall of 1955 and some investment analysts questioned, at the time, the profitability of this merger since the ball point pen business is notoriously a highly competitive one. Paper Mate is the largest American producer of ball point pens and this division fits in well with Gillette's known preference for products with a timeless refill demand. Gillette has, despite the aforementioned Mate each year, and is busily at work improving its profit mar-

> Like most modern successful companies, Gillette is research-minded. The company has five research laboratories, spent \$4 mil-lion in this area last year, and will increase the outlay for 1960. Research not only includes refinement of existing products and ideating new ones but is also devoted to improving manufacturing and engineering techniques all along the line.

The advertising genius of Gillette is world renowned. Sportsmen are never allowed to forget men throughout the world. Altogether Gillette spent about 17% of sales-almost \$36 million-on advertising in 1959; and there is no doubt that we will be asked to "look sharp" even more frequently in 1960.

Another facet of Gillette's operations that offers a vista of expansion for the future is the Gillette Laboratories division, founded in 1957 to manufacture and market proprietary drugs. Under an arpany this division now markets Thorexin cough remedy and cold capsules. Addition of new drug products, over time, would seem

Investors who have followed

time have come to feel that this equity is not only a consistently fine earner and a reliable dividend payer, but displays a number of growth characteristics as well. This is due to the constantly broadening product list, TRADE and INDUSTRY emphasizes good grooming, and the high conversion rate of sales into profits. Gillette earns 30% in net before taxes.

Financial Strength

Financially, Gillette has been a magnificent performer. It has no funded debt and has paid dividends on its common since its first year in business, 1906. In good times or bad, men want to look presentable and they do not propose to lose an order, a job or a social advantage "by a whisker."

At the 1959 year-end the company had over \$51 million in net working capital which is plenty of money for operations and a sizable war chest available for merger purposes as well. Any high profit quality product that can be sold in a drug store is legitimate merger bate for Gillette.

Dividends

record. It's not only a long but a generous one. The average payout has been 70% of net over the past 15 years and there were six dividend increases in the 1950 decade. Present rate is \$2.50. In addition there was a 2-for-1 stock split in 1950 and again in 1955, and board room gossip has hinted at another split within the next 10 months, a rumor that management has denied.

Sophisticated stock buyers who have taken a good look at GS seem to like the view. Sharehold- quence, they are inclined to regard business might stop short of actual ers have increased in number from 25,000 to 40,000 in the past fall as a virtual certainty. Whether and this sugggests that the retardseven years and three major mutual funds are reported to have a rise in steel output of normal gross national product may persist added Gillette to portfolio this

The year's high for GS was 87½. The current quotation is near there. These figures seem to reflect an indicated rise in per share net from \$3.34 last year to around \$3.75 for 1960. Whether GS has discounted its pleasing prospects too heavily is a legitimate question. But that the stock is solid equity with a perceptible growth factor, nobody can deny.

Banker Named By Ohio Val. IBA

cial conditions that:

Late-summer business reports, while they show over-all activity at high levels, continue to carry a tone of hesitancy, extending the element of uncertainty which has arisen as to the economic outlook

appointing. Sales of new cars during the first two-thirds of August ran below the pace a year earlier, continuing the weak pattern which emerged in July. As a result, dealers' stocks of unsold cars remain uncomfortably large and could be an obstacle to sustained high-level production of the new We mentioned the long dividend models to be introduced this fall.

Output prospects are also uncertain in the case of steel. The increase in orders that had been widely expected to appear by late summer has not materialized. Instead, it appears that steel users have continued to draw on previously accumulated stocks to meet part of their needs. Steel makers doubt that this practice can continue much longer, since the inwas believed to be close to the recession low of 1958. As a conseit will prove sufficient to warrant ing influence of the adjustment on autumn proportions remains to longer than had been previously

Order Backlogs Still Declining

sistence of this trend is one of the most worrisome features of the business situation.

Seasonally adjusted, manufacturers' new orders in July totaled \$29.4 billion, down \$700 million of apparent inventory tendencies, from June. Whereas the declining tendency of orders in previous months was pretty much confined spending for goods and services to durable-goods industries, weakness in July spread to the non- by business have been high, but durable goods sector as well. Whereas total business inventories increased at an annual rate of \$11 billion in the first quarter, the rate of accumulation fell to \$5 billion in the second quarter.

for the rest of the year.

So far the "cleanup" of 1960model automobiles has been disactual net liquidation of stocks on a moderate scale by business in general. July data show this to be the case, and there are indications that liquidation may have continued into August. Bank loans, for example, showed a declining trend. From the beginning of July through the third week of August. business loans of weekly reporting member banks decreased by about \$1,150 million. This was in contrast to experience in the comparable period of 1959, when such loans rose by \$700 million. In the final week of August, a sharp rise occurred in business loans in New York City, but it is impossible as vet to assess the significance of this break in trend.

With inventory-to-sales ratios considered generally satisfactory ventory level at the end of August by postwar standards, there was good reason until recently to believe that inventory adjustment by some improvement in orders this liquidation. Apparently it hasn't, anticipated. It will be important to watch inventory statistics Order Backlogs Still Declining closely for the next several Order experience has been dismonths to see whether the reducappointing not only in steel but tion in stocks continues. Automotive Buying of Sheet Steel Hits Uptrend

Automotive industry buying of months, Steel magazine said.

Some automotive tonnage originally scheduled for late August delivery is going out from the mills. That means September will experience a noticeable pickup in deliveries. Generally, developments in autos will point the way for steel the rest of this year.

The metalworking weekly said finished steel demand is increasing slowly, with steelmen booking model season with better-than- sistance to agricultural integrasmall orders more actively. One Midwestern mill reports daily order receipts gained for four consecutive weeks; the latest week's tonnage was the best since February. Another mill's orders are inventories have been the most resistance to European agriculthe best since April.

Consumer stocks still act as a damper on new steel buying. Consumption is running ahead of incoming shipments, so it's believed that buying, at least for prompt shipments, can't be put off much longer. Until delivery promises tighten, however, there's little likelihood of much stock rebuilding.

September order placement is that September steelmaking op-

Last week, national ingot production was estimated at 1,441,000 as significant in the low state of net tons. The ingot rate averaged steel operations: 50.6% compared with 52% the preceding week. Part of the drop was due to curtailments over Labor Day.

ther drop in nonfarm housing movement of scrap for export has starts clouded the picture. been slightly hampered. Scrap prices are fluctuating. What It Would Cost Britain pending a revival in mill buying. Steel's price composite on No. 1 To Join The Common Market

By Paul Einzig

Should the British jettison the Commonwealth for the sake of being admitted to the European Common Market? Answering the influential argument of the declining importance of "preference" trade with the Commonwealth, Dr. Einzig characterizes the data used in support of the argument misleading. He asks what would happen to the British cost of living and to the growth of newly-created African countries, who must export in order to stand up to USSR inroads, if the Commonwealth were excluded from, and Britain joined, the ECM.

Experts see a growing market wealth Finance Ministers are Treaty is on the increase. A small towards trade relations with Commonwealth trade for the sake Zealand, in particular and to a less extent Australia will exert the utmost pressure to prevent the Government from going too far in sacrificing Commonwealth trade for the sake of joining the European Common Market.

It now seems that the Common Market's attitude towards British trade with the Commonwealth There is a slight seasonal upturn constitutes the only really grave its suppliers are taking anything tural integration was also conlike a respectable tonnage. And sidered a more or less equally tion is strong enough to remove the likelihood of adopting a sysceptable to British agriculture. The strengthening of American tural integration also reinforces British opposition to it. It is average is merely between 4 and therefore possible to visualize an

A Suggested Compromise

The position is totally different, however, as far as trading with the Commonwealth is concerned. that this did not happen put the The idea of admitting Commonwealth products into the Common Market is of course, entirely uncountries of the Common Market. The small farms in France would be entirely unable to face the competition of Canadian or Australian land products. The only formula which might prove to be acceptable would be to exclude Commonwealth and allow Britain a free hand to continue the existing preferential system as far as agriculture is concerned. The main objection to this on the part of the Common Market is that once these products are in Britain they could find their way under the guise of British prod- have to be on terms that safe- & Co. Incorporated. ucts into the Common Market.

That problem has its answer in has been effected without too to stimulate buying, such as the the form of certificates of origin. Continued on page 30 There was no difficulty whatsoever in elaborating an acceptable formula at the Stockholm negotiations which lead to the formation of the European Free Trade Association. There is no reason why the countries of the Common Market should be more distrustful about the possibility of abusing the system of certificates of origin. In any case as far as land products are concerned Britain could well undertake to renounce exporting such products to the Common Market under preferential arrangements, for the simple reason that in any case the volume of British land products imported by the Common Market is negligible. It will take some time, however, before this obvious solution would become acceptable to France, and possibly other Common Market countries.

> Growing Public Opinion for ECM Meanwhile pressure in Britain to induce the Government to sign

LONDON, Eng. - The Common- on the dotted line of the Rome Western Europe will be the main of being admitted to the Common topic of their discussions. New Market. In support of their attitude statistics have been published showing that the value of Commonwealth exports admitted to Britain under Commonwealth from Western Europe. preference represented in 1957 only between 4 and 5% of total Commonwealth import compared with between 6 and 7% in 1948. Those in favor of joining the Common Market at all costs argue that in view of the declining importance of preference its abandonment would not consist of a J. W. Sparks Co. major blow to the Commonwealth

Whenever conclusions based on statistics are in flagrant conflict with those based on common sense j. W. Sparks & Co., 120 Broadit is on the whole advisable to give the latter the benefit of the New York and Philadelphiadoubt pending further investigaof preferences to total Commonwealth exports conceals wide discrepancies as to the extent to which particular Commonwealth Thomson & countries and particular commodities are liable to be affected. It McKinnon Admit is all very well to say that the 5%. The fact that it is so low would be of small comfort to some industries in Commonwealth countries, which can barely hold their own on the British market against Western European competitors even under existing arrangements. The elimination of preference would spell ruin to such industries. What is even more important, under the integrated tariff of the Common rett & Sons, South & Redwood Market, Britain would impose Streets, members of the New York duties on raw materials and food from the Commonwealth, which are at present free of duty.

It seems probable that responsible quarters in Britain will not allow themselves to be mislead by the sophistry of statisticians, even above figures influenced the at- Infante has joined the staff of

guards the vital interests of Commonwealth countries.

What Would Happen in Africa?

From a purely British point of view too, the imposition of duties on food and raw materials which are at present admitted free of duty and the increase of duties on those which are admitted at present at very low duties would present grave disadvantages. It would increase the cost of living and the cost of production and would more than offset the effect in an opposite sense resulting from a reduction or elimination of duties in relation to imports

Last, but by no means least, the penalizing of exports of the newly-created African countries would open the way to Communist political and economic influence in said countries.

TAX-EXEMPT BOND MARKET

BY DONALD D. MACKEY

The level of the tax-exempt bond. market has not been given any serious test since reaching its August. The moderately heavy new issue volume of June and from almost any investment view-

Substantial Price Rise

during August, continued to mark \$7,000,000 is in account at present. up prices even though the rate changes had been quite thoroughly exploited price-wise durof investors in many recent new issue offerings at a seasonal juncture that normally ushers in a much heavier volume of new issue virtually a state credit although offerings.

However, dealers have been The group headed by Drexel & quick to sense this market unset- Co. and including as major paring the past week price adjustterm bonds, have more closely represented the level of early August rather than the markedup level obtaining later in August and early September.

A Good Performance on the Thruways

The New York State Thruway balance at his writing. Authority offered \$50,000,000 State guaranteed serial (1985 - 1995) bonds on Thursday, Sept. 8. Judging by the recent action of the bond market, one might have expected at least two bids for this final issue of Thruway guaran-teed obligations. After thorough consultations, a joint single bid was proffered by the two traditional bidding groups.

The State Comptroller very wisely accepted the bid, even though it represented the pricing of this long term issue for retail at levels considerably lower than similar representations in the secondary market. Despite this purportedly bargain pricing, the offering was not a sell-out as many thought it would be. On initial offering about \$32,000,000 was taken down from the account and, at this writing, close to \$16,000,000 remains as a balance.

All factors being considered we been the case before. Secondly, ance being about \$3,400,000. the managers exercised leadership in their judgment of a market that had been projected upward on flimsy premises within a brief period.

Dated October 1, 1960

Due October 1, 1961-80, incl.

Payment and Registration

Principal and semi-annual interest (April 1 and October 1) payable, at the option of the holder, at the office of the Treasurer of the City and County of San Francisco, California, or at the fiscal agency of the City and County in New York, N. Y. Coupon bonds in denomination of \$1,000 registrable only as to both principal and interest.

Tax Exemption

In the opinion of counsel, interest payable by the City and County upon its bonds is exempt from all present Federal and State of California personal income taxes under existing statutes, regulations and court decisions.

Legality for Investment

We believe that these bonds are legal investments in New York for savings banks and trust funds, in Connecticut for savings banks, and in California for savings banks, subject to the legal limitations upon the amount of a bank's investment, and are likewise legal investments in California for trust funds and for other funds which may be invested in bonds which are legal investments for savings banks and are eligible as security for deposits of public moneys in California.

Purpose and Security

These bonds, issued under provisions of the Charter of the City and County of San Francisco and the laws of the State of California for various purposes, in the opinion of counsel constitute valid and legally binding obligations of the City and County of San Francisco and the Board of Supervisors thereof has power and is obligated to levy ad valorem taxes for the payment of said bonds and the interest thereon upon all property within said City and County of San Francisco subject to taxation by said City and County (except certain intangible personal property, which is taxable at limited rates) without limitation of rate or amount.

Tax Gain, Amortization of Premium

These bonds will be initially issued by the above named political subdivision at not less than their par value, and a taxable gain may accrue on bonds purchased at a discount. Investors are required under existing regulations to amortize any premium paid thereon.

Legal Opinion

The above bonds are offered when, as and if issued and received by the underwriters listed below, as well as other underwriters not shown whose names will be furnished on request, and subject to approval of legality by Messrs. Orrick, Dahlquist, Herrington & Sutcliffe, Attorneys, San Francisco, California, a copy of whose legal opinion will be printed on each bond.

Puerto Rico's Tax Exemption exemption over cost will be taxed. Finally, there is an inducement to retain Program and U.S. Investor

By R. Palmer Baker, Jr.,* Partner, Lord, Day & Lord, New York City

Analytical legal appraisal is made of the "enormously attractive" investment situations available for American business in Puerto Rico. Mr. Baker briefly outlines the advantages which the Commonwealth tax exemption program holds for mainland investors and then describes the United States income tax arrangements which can be made to obtain these advantages. This paper illustrates the points made by going over the various investment vehicles available and by distinguishing the benefits of the various programs from each other. Rather than wishing to over-emphasize the attraction of a tax-free liquidation before the end of the exemption period, Mr. Baker makes the reminder that in most cases the investor may prefer to continue the business beyond the exemption date because of regular inducements under usual tax laws.

The source of Puerto Rico's ad- subsidiary of another corporation, vantages to mainland investors domestic or foreign. lies in the fact that the United How is a United States investor States internal revenue laws do to take advantage of this pronot apply in Puerto Rico. Instead gram? If the business can be kept the Commonwealth has its own free of United States tax, its earnsystem of taxation, now incor- ings for 10 years will be entirely porated in the Puerto Rican in- available for accumulation and come Tax Act of 1954. This sys- reinvestment in the business—or tem is readily understandable to elsewhere. As a further incentive, business men from the mainland, the usual Puerto Rican withhold-because it generally follows the ing tax of 30.45% on distribu-Internal Revenue Code of 1939. It the exempt business, conducted to incorporate form, is liquidated the Commonwealth to offer a before the end of the 10-year exemption period. Similarly, sales of the stock during that period ment from the mainland.

1954 is an extension and modifi-cation of the successful tax ex-exemption period only the postemption program initiated in 1947. Several types of exemption are now available for eligible new businesses which make application application. I To be reduced to 15% under recent legislation, effective July 31, 1961, if the payer is engaged in manufacturing in Puerto Rico. before Dec. 31, 1963. Eligibility extends to the manufacture of the wide range of goods not produced in Puerto Rico on Jan. 2, 1947, and also to the production of a con-siderable list of designated additional articles, from artifical flowers to paperboard and paper pulp. The income earned from such businesses, and from property made available for the use of these businesses, is exempt from tax for a period of 10 years. In addition—and manufacturers with experience in overseas operations will be particularly appreciative of the following—there is an exemption from insular and municipal property taxes for a period of from 5 to 10 years, and from municipal fees and excises for 10 years. Tourist hotels are also entitled to these exemptions, and commercial hotels receive a 50% exemption.

Worthwhile Repeating

It is worthwhile calling this enormously attractive program to the attention of American business again. The exemption is granted by the Governor, who administers the program through the Industrial Tax Exemption Office. Once granted, the exemption has the protected status of a contract between the exempt business and the Commonwealth. In the absence of fraud, it can be revoked only because of failure to comply with the Act or because of arbitrary interruption of production by the exempt business for more than 30 days. In order to prevent abuses from trading or speculating in the exemption, certain transfers of property or interests in the exempt business require the approval of the Governor during the exemption period. However, partnership and stock interests may be freely sold if a change of control does not result, and otherwise may be salable with the Governor's approval. There is no inhibition on transfers by operation of law or death or as a pledge to secure debts. Finally, and of obvious importance, no approval is required to liquidate an exempt corporation which is an 80% or more owned

The Industrial Incentive Act of will not be taxed in Puerto Rico,

there is an inducement to retaining ownership and keeping the corporation alive in that the earnings of the first seven exempt years can be paid out as dividends free of withholding tax at any time within 15 years from the start of the exempt operations if the recipient either resides in Puerto Rico or does not have to pay tax to another jurisdiction. The latter qualification makes sense, because a United States citizen and resident, for example, can credit the Puerto Rican with-holding tax against his United States tax liability.

How is the United States investor to take advantage of this pattern? Let us take the situation of the corporate investor first.

Advantages to the Corporate Investor

The Puerto Rican branch profits of an ordinary United States corporation would be fully subject to tax in the United States. A separate subsidiary corporation is therefore required to carry on the exempt Puerto Rican business, and obviously this must be Considered a Foreign Corporation a corporation with special status under the United States tax laws. In fact there are three choicesa Western Hemisphere Trade Corporation; a domestic United States corporation which qualifies for the benefits of Section 931 of the Internal Revenue Code; and a Puerto Rican corporation.

The Western Hemisphere Trade Corporation is a familiar vehicle, poration which meets each of these three tests:

sources outside the United emption period) Puerto Rican tax. States.

(2) 90% or more of its income must be derived from the ac-

(3) All of its business, other than incidental purchases, must be done in continental North, South and Central America, or in the West

Such a corporation receives a special deduction which results in maximum United States tax burben of 38%, or 14 points lower than the usual tax rate. Even this lesser burden, however, reduces the attraction of the Puerto Rican exemption. Moreover, dividend distributions to the parent out of the Puerto Rican earnings are subject to the approximate 30% Puerto Rican withholding Tax.¹
The bulk of this tax cannot be absorbed by way of credit against the United States tax which has to be paid at the maximum intercorporate rate of 7.8% on the dividend. Hence the overall Puerto Rican and United States tax burden come to about 57%.

The answer for the investor in this case stems from the fact that the United States does not tax the earnings of a foreign corporation unless these earnings are derived from sources within the United States. A Puerto Rican corporation is considered to be a foreign corporation. And, under section 931 of the Code, a domestic corporation may be treated like a but it is not very satisfactory for foreign corporation if it earns
Puerto Rican operations. The enough of its income in Puerto Code defines it as a domestic cor- Rico. Through the use of one of these vehicles, the Puerto Rican income may thus be kept within tion may be lost if there is not (1) 95% or more of its gross the corporation free of both meticulous adherence to its statuincome must be derived from United States and (during the ex

In each case, dividend distribu-tions to the United States parent bear the full rate of corporate tax, tive conduct of a trade or since the 85% deduction, available business. corporations, with the resulting maximum rate of 7.8%, does not apply. However, in this circumstance, the Puerto Rican withholding tax does not impose an additional burden, since it is wholly absorbed as a foreign tax

> A domestic corporation qualifying under section 931 has one material advantage over the Puerto Rican corporate form. Because it is a domestic corporation, it may be liquidated tax-free into its United States parent if the parent owns at least 80% of its stock (other than non voting stock limited and preferred as to dividends). Theoretically, therefore, all of the Puerto Rican profits of such a corporation can, if accumulated, be brought home to the United States free of any tax. By way of contrast, a Puerto Rican corporation, like other foreign corporations, cannot be liquidated tax-free without the prior ap-proval of the Commissioner of Internal Revenue under section 367 of the Code. This approval has been granted in some recent situations, but it is not easy to convince the Commissioner, as the statute requires, that a principal reason for the Puerto Rican arrangement is the avoidance of Federal income taxes Accord-Federal income taxes. Accordingly, the liquidation of a Puerto Rican corporation will normally entail a 25% capital gains tax.

The difficulty with a domestic corporation under section 931 is that all of the benefits of the section may be lost if there is not

Moderate Business Recession Ahead

By William F. Butler,* Vice-President and Economist, Chase Manhattan Bank, New York.

Leading bank economist, while asserting that 1960 will be recorded as a good year, foresees a subsequent serious downturn to follow in early 1961. Excepting for a major step-up in defense spanding, he believes no Government anti-recession action could be invoked promptly enough to be effective. Dr. Butler notes profits squeeze resulting from rising unit labor costs. Foresees cutback in auto sales furthered by self-imposed consumer credit restraint. Citing slow-down in economy's over-all growth rate, advocates remedy via reduction of tax burden on saving and investment, and holding wage rate rises within economy's ability to pay them. Warns against massive Government spending as anti-recession method.

should move higher. Auto output

will run at a high rate as inventories of 1961 models are amassed. Business still plans to carry out capital expenditure programs for 1960, which means a sus-tained high level of expenditures in this key area.

William F. Butler

1960 Thus will go down on the books as a good year for general business, though not a boom year. In some respects it will prove a disappointing year in that sales in many lines will fall short of earlier expectations. Yet it will be a year of record highs in production and employment without inflation-and that's

a considerable accomplishment. At the same time, it now seems clear that the economy is ap-proaching a downturn into the recession phase of the business cycle. While the precise timing of the turning point can be affected by decisions yet to be made by business and government, the downturn will probably come in early 1961. However, it could come late this year if a move to cut capital expenditures and pare inventories in anticipation of a recession should gain sufficient momentum.

Sees Similarity to Previous

The present prospect is that the

The present prospect is that busi- generally comparable in intensity ness should pick up moderately and duration with the three pre-after Labor Day. Steel operations vious recessions. In some significant respects, the economy is better situated to resist downward pressures than was the case in 1957. However, it should be remembered that the postwar business cycle pattern has involved a decline in industrial production of 10-15% in the year immediately after the downward turning point, followed by three years of recovery and good business.

These prospects could be changed if international developments should call for a significant step-up in the defense effort. Short of that, it is unlikely that the new Administration could have much effect on the course of the recession phase of the cycle. However, actions taken to spur recovery in 1961 could have profound implications for the future growth and prosperity of the na-

reasons for expecting 1961 to be a recession year. Of these the most significant is the prospect of a decline in business investment in new plant and equipment.

Plant and equipment expenditures in current dollars have not regained their 1957 peak. This lag in investment reflects the lag in year were only 5% above the pre-1957. The lag in profits is explained by two developments:

Wages have continued to incosts about 2% per annum.

since 1957 is one-half of 1%.

The Profits Squeeze

Thus, profits have been squeezed by rising unit labor costs. A decline in the rate of profit invariably leads to a cutback in expenditures for new plant and equipment. Business must reduce the rate of growth of capital assets in an attempt to maximize the rate of return. This means that only those investment projects which offer a good return can go ahead.

The magnitude of the decline in plant and equipment expenditures is difficult to toresee at this juncture. Most companies are in the process of preparing capital budgets for 1961. However, a statistical analysis would point to the possibility of a 15-20% drop from the end of 1960 to the end of 1961, or somewhat less than that in the 1957-58 recession.

Auto Slow-Down

At the same time, auto sales will probably be lower next year. Instalment credit has risen rapidly in the past 18 months and has reached the point where the current rate of repayment takes 13% of consumer income after taxes. Experience in recent years suggests that individuals are reluctant to incur further debt once this point has been reached. Next year may see repayments on past credits rise above new credit extensions, as was the case in 1958. This could mean a cutback in auto take action rapidly enough to sales from 6.0 million this year

Surveys of consumer attitudes year. in the past month or two show an increasing reluctance to buy durable goods. People are concerned about the future stability of their incomes, worried about higher fore general business activity There are a number of cogent prices, and more inclined to defer turns up. The built-in stabilizers purchases of autos, refrigerators and other such products.

Inventory Adjustment

Any decline in business sales could touch off a period of inventory liquidation. Inventories are not top-heavy as measured by past standards, and steel inventories are on the low side. None-- corporate profits after theless, business is trying to taxes in the first quarter of this economize on inventories so that any general drop in sales could vious peak in the first quarter of lead to a severe cutback in orders in an attempt to squeeze down the level of inventories.

The shift in inventory buying crease more rapidly than output cut demand by \$9½ billion a year per man-hour, raising unit labor in the first six months of the 1957-58 recession and accounted Prices of industrial products for more than half of the decline 1961 recession should prove to be have held stable for more than a in GNP. While there is no way to

year, and the average annual rise forecast the possible swing in inbe comparably large.

Warning Signals

The National Bureau's leading indicators tend to confirm the view that the economy is heading into a recession. The indicators have not yet given an unequivocal signal of an impending downturn. But they have displayed increasing weakness, and now present a picture similar to that 6-9 months before past recessions.

Elements of Strength

While the downward forces at work appear to be powerful enough to bring on a recession, there are also significant elements of strength in the picture. They promise to provide substantial support in the period ahead. In fact, prospects in a number of areas are more favorable than they were in 1957-58. Thus, there is good reason to hope that the 1961 recession will be no more severe than the previous three postwar recessions.

Housing starts could rise from their recent annual rate of 1.3 million to 1.5 million (the rate reached in nearly 1959). While reports are that sales have been sticky in many areas of the nation, the greater availability of mortgage credit plus efforts by builders to meet the price and quality requirements of customers could support such an upturn. Housing expenditures could

Consumer purchases of nonbe maintained in the early stages of a recession and to increase beoperate to maintain personal instages of a recession. By so doing, they support expenditures for non-durables and services and pave the way for an upturn. These expenditures could rise by a \$10 billion rate in the year ahead (that is almost one-fourth less than the increase that took place in the first year following the 1957 downturn).

Government expenditures could, on the basis of present budget prospects, rise by some \$5 billion in the year ahead. Federal expenditures could go up \$2 billion or more — in the declining phase of the 1957-58 recession they showed little increase.

Exports might hold up fairly moderately. While the nation's would remain precarious, it might we confront. not worsen much in 1961 (in contrast, the swing to deficit was almost \$4 billion in 1958).

Moderate Recession

This adds up to the prospects of First Jackson a moderate recession. Here is how the arithmetic works out:

eral dimensions appear in prospect between mid-1960 and mid-1961 (figures in annual rates):

\$billions change mid-'60 mid-'61 \$bill'n. perct. Plant & eqp. 37.0 32.2 — 4.8 —13% durables - 44.5 40.7 - 3.8 - 9 Inventories + 5.3 -7.0 -12.3 -Total ___\$86.8 \$65.9 —\$20.9 —24%

Shillions mid-'60 mid-'61 Sbill'n. perct.

Housing ____ 21.3 23.5 2.2 11%

Consum. nondur. & serv. 284.4 294.3 Governmt. — 98.6 105.0

Total ___\$404.3 \$422.8 \$18.5 On balance, GNP at annual rates would decline less than 2% from peak to trough.

However, industrial production could drop 10-15% from top to might go down 15-20% while inventories are worked off.

The above arithmetic illustrates ventory buying in 1961, it could a significant characteristic of the U. S. economy—only about a fifth of economic activity takes place in the volatile area of durable goods production, whereas the other four-fifths displays a great resistance to a general business decline.

This does not mean that a severe and prolonged recession is impossible. Under certain conditions a train of events could unfold to overwhelm the elements making for stability and produce an intractable recession. The odds against such an outcome in the next year or two seem very high.

To sum up, the most probable outlook is that the nation will move into a phase of moderate recession in 1961. The decline in industrial production might run on six to nine months and carry the Federal Reserve Board index down 10-15%. However, the sustaining forces appear powerful enough to generate a renewed advance by late-1961 or early-

Longer-Term Problems

While the economy should recover with reasonable promptness from the recession that seems to lie ahead, there will remain a serious long-term problem of achieving the sort of economic growth of which the nation is capable. Very briefly, the problem is that:

(1) There has been a definite - down in the economy's slow over-all growth rate - from 4% per annum from 1947 through to something like 5 million in 1961. rise by \$2 billion in the next 1955 to 2% during the last four

(2) The major reason for this durable goods and services tend to slow-down appears to be a squeeze on profits - unit labor costs have risen more than prices.

(3) Thus the rate of investment in new plant and equipment has been held down and this has come after taxes in the early slowed the advance in the economy's productive efficiency.

The appropriate remedy involves two things: Reducing the tax burden on saving and investment, and increasing excise taxes if need be; and (2) Holding the rise in wage rates within the limits of the economy's ability to pay them. With the tremendous worldwide responsibilities the nation faces, such actions are essen-

The longer-term danger in the period ahead is that the nation might resort to massive government spending to deal with the 1961 recession and promote economic growth. This route would also sap our economic vitality and not only fail to produce genuine well, while imports might decline economic growth but it would hence reduce our ability to meet balance of payments position the challenging problems which

Politics, Prospects and Prices In the American Economy

By Dr. W. L. McMillen,* Associate Economist, Morgan Guaranty Trust Company of N. Y., New York City

New York bank economist discerns no recession for the balance of this year; denies we are on a verge of such a downtourn-which he defines; and predicts economic improvement will occur by the middle of 1961. Dr. McMillen's paper covers the spectrum of current economic news, ranging from rate of growth comparison with U.S.S.R. to prospects of inflation, and he criticizes businessmen for not timing their capital expenditures and inventory purchasing more wisely. Too often, he points out, businessmen's "timing of their spending has aggravated an already undesirable situation." The writer also points out certain facts regarding our capacity for economic growth, and the need for removing impediments to growth.

greatly affect the course of busi- sesses. ness in the next two or three

years. There is, however, a danger for the longer run in some current political thinking which will create pressure on prices. In the second portion of the discussion I shall attempt to support the view that a serious

Wayne L. McMillen

recession is not impending. Furthermore, I hope to show that those in charge of the purchases for business firms (for inventory and for plant and equipment) have a great opportunity to make a contribution to our general economic stability. In fact, their contributions could result in the next substantial step toward taming the business cycle. Lastly, I shall venture the opinion that prices will be rather stable with only a slight rise during the next six months or so, but over the next five years inflation may reappear as a paramount issue.

Political Issues

We are in the midst of our national quadrennial emotional spree. We shall continue on this "binge" under the glare of both We shall continue on this footlights and floodlights. The audience is both domestic and worldwide. But Scotty Reston of the New York Times has pointed out that when the curtain goes down, the leading man can say, "I am the only President in history from General Washington to General Eisenhower to campaign on Jack Paar's Program. No other President can make that claim!"

leading men will have plenty of ity of helping them). gray hair by Jan. 20, 1965. Our foreign neighbors will, in most part, sit through the drama in relative darkness, confused by the conflict between (a) our preachment to them in regard to political and economic freedom, political and economic sanity, and political, social and religious tolerance on the one hand, and (b) our demand that our own politicians ignore this preachment in their domestic policies. We must watch the play with more detachment and less overt emotional involvement. We should remember that when the curtain goes down and the "good man" has triumphed, he will receive a shock under the cold shower of responsibility. Having washed away the grease paint in this shower, the winner will then muffle the type of appeal he made during the campaign and will bite his lips in embarrassment over promises he has made to us, and

Comments on Growth Comparisons

Is our economy growing fast enough? My observation is that almost every industry in the United States is eager and waiting to grow. If not growing, some impediment to growth is the cause, such as a limited market, inability to expand productive capacity, or costs that are relatively too high.

Has our economy grown as fast as that of the Russians? Perhaps not, but data indicate that the economies of West Germany, Greece, and Japan have grown more rapidly than that of Russia. In our lifetime will Russia overtake us? I doubt it. With current prevalent reasoning, you can just as properly argue that West Ger-many will overtake Russia for the growth rate in West Germany seems higher than that in Russia,

Over-the-Counter Market -What It Offers Investors

By Maurice Hart,* Vice-President, New York Hanseatic Corp., New York City.

Aware of the incongruous fact that the "over-the-counter" market is the world's greatest and yet the least known, Mr. Hart outlines the scope and mechanics of this market in order to make better known its portfolio building potentialities. In one of his comments, he shows why the floor specialist has an easier job than the over-the-counter trader who competes with as many as 15 or 20 other traders in the same issue. Noting the increased interest being manifested in the unlisted market, Mr. Hart foresees a greater growth for the market as our economy expands.

ably originated when men bought and sold securities pretty much the way they bought or bartered supplies in a

store or mill. I presume when the Stock Exchange was organized securities which were not traded on the Exchange were referred to as those "over the counter" and perhaps for lack of a better term the name stuck.

Maurice Hart

The Over-the-Counter Market is also frequently referred to as the Unlisted Market.

The scope of the Over-the-Counter Market is so wide, the number of issues traded is so large, and the volume is so, I might say astronomical, that it has been called, and I think rightly, "the world's greatest market." Nevertheless, it is the least known and I am sure the least understood, not only by the investor, but to a great extent by the securities in-dustry itself. There are many misconceptions on the Over-the-Counter Market . . . some of them quite humorous. Recently I was part of a golf foursome. One of the members of the team was a gentleman whom I met for the first time. He asked me casually what business I was in. When I mentioned Wall Street and added over-the-counter securities, this was his reaction. "Say," he said, "You fellows have some racket." "Well," he went on, "I see you bring out a stock at \$3 or \$4 a share and it goes to 9 or 10 the same day. Wow, what a mark-up." and mechanics

business we gave you yesterday." Naturally I thanked him and asked "What was the order?" He said, "We sold you 100 shares of stock 'X'." He must have been surprised at my startled look. "Well," he continued, "your trader made the market 200 to 210." "How do you figure we made \$1,000," I inquired. "That's easy," he replied in all sincerity, "we sold you 100 shares at 200 and you probably sold it at 210 . . . that's \$1,000."

It so happens that the stock referred to has a very volatile market, and frequently trades in 50share lots or even less. He was completely ignorant of the fact that our trader who maintains the market in the stock might be assuming a market risk which could have easily resulted in a sizable

Brady With department, he frequently has to depend on instruct, his feel of the Greene & Company market and a certain sixth sense.

Offers Top Portfolio Choices

The interest of investment security analysts undoubtedly lies in what the Over-the-Counter Market offers in the way of investment for their clients' portfolios. In this respect the Over-the-Counter Market offers a tremendous variety. It is certainly a market of extremes. From Government, municipal and triple A corporate bonds to low-priced speculative issues. The securities of some of the world's largest and most successful corporations are available only over the counter. The stocks of the largest banks, insurance, and many utility companies are traded almost entirely over the counter, as are the securities of the World Bank. In addition, there ment trusts and many Canadian and foreign securities. To these we must by all means add the electronic stocks so currently pop-

priced stocks but on the other hand there are stocks like Christiana Securities which sell around \$13,000 per share. Shares of the world's largest lumber company, of course, are familiar names and I could go on and name hundreds ated with the Department of Ecoyears a large interest has developed among shrewd investors in Dominick Firm the excellent opportunities offered in foreign securities—the stocks of such fine corporations as Phillips Lamp (the European General Electric), Unilever (one of the world's largest soap and cosmetic companies), Bowater Paper (the well-known English paper company), and Farbenfabriken Bayer (the large German chemical-drug partnership. corporation).

The research departments of the

Keep in mind that every new issue is first traded over the counter even if it's slated to be listed eventually.

Hundreds of stocks now listed Stock Exchange were formerly

Increased Interest in Over-the-Counter Issues

The interest in over-the-counter securities has increased greatly in recent years. A further indication of this is evident by the number of stock exchange firms who have either opened or enlarged their over-the-counter trading department and a number of them have issued pamphlets to acquaint their clients with the opportunities for investment in over - the - counter securities. As our economy expands and new industries are developed there will be a constant addition, many fine family-owned firms will probably be going public. Thus there will be many new opportunities for investment in future growth companies. As heretofore they will all first be available only on the Over-the-Counter

How Mutual Funds Can Meet Life Insurance Competition funds that at least they obtained their insurance coverage from

By Norman F. Dacey, Norman F. Dacey & Associates, Inc., Bridgeport, Conn.

Reflections on "War and Peace" between the life insurance and mutual funds industries propose entry of mutual funds into the life insurance business by way of retaliation. Mr. Dacey admonishes the mutual fund industry to recognize it has come of age and to meet the new competition. A proposed Mutual Life Insurance Co. would provide insurance for voluntary and contractual investment plans and is said to constitute a "perfect 'variable annuity.'"
Mr. Dacey comments on the unexpected effect term insurance has had on the insurance industry; avers life insurance provides no more of an investment than mutual funds provide protection; and proposes a new objective for mutual funds which would offer a growth investment for earlier years and become a balanced fund for later years.

Recent announcement of the of- cash values rapidly, thus reducfering of a \$12 million stock issue ing the insurance companies' risk

seriousness of those who have waged a determined fight for the right to sell this new investment/insurance hybrid and who now feel that despite the restrictions and inconveniences attendant upon registration

and sale as a security under the critical eye of the Securities and Exchange Commission, they can successfully develop a popular demand for their product.

There are those who feel that at best the variable annuity is but a clumsy duplication of the job a demand for cash. The rate structure upon which but with investment management these low - cost group policies are of the investor's own choosing whose performance record will be exposed daily to the searching eye of the public.

> If the life insurance industry is going into the mutual fund business, perhaps the mutual funds should go into the life insurance business.

Incidentally, there are many write similar plans for other fund: investors who would like to accumulate during their earning years in a common stock or growth fund but who recognize that a balanced fund may be more suitable at retirement. Unforsuitable at retirement. Unfor-tunately, they are locked into the more volatile fund by their capital gain tax liability. The solution may lay in the establishment of a "1970 Fund," a "1975 Fund," a "1980 Fund," etc. Each fund would be a growth fund until it reached its date after which it would automatically convert to a balanced fund, not by selling its common stocks but merely by putting incoming new money into bonds.

The mutual fund industry has come of age. It is time for it to stand erect. It has fought its way upward through the stigma of a second-class investment, accepting without real protest a Statement of Policy which brands its field organization as an army of financial cut-throats. Thousands of honest fundmen, emulating the industrious insurance man, have gone out and beaten the bushes for business only to have their industry and persistence damned as "high pressure."

The average mutual fundman doesn't understand the outcry. He has just gone right on working. The next generation of Americans will owe its financial security largely to him.

S. D. FULLER & CO.

Boston Capital Stock Offered

An underwriting group headed by Shearson, Hammill & Co. offered on Sept. 14 1,500,000 shares of the \$1 par common stock of Boston Capital Corp., a new small business investment company. Priced at \$15 per share, the offering will realize gross proceeds of \$22,-500,000.

Boston Capital Corp. is a closedend, non-diversified management investment company registered under the Investment Company Act of 1940 and licensed under Small Business Investment Act of 1958. The company's primary objective will be investment for capital appreciation.

Management of Boston Capital Corp. has experience in a wide range of executive, advisory, and financial activities. Board Chairman is John P. Chase, a principal executive officer of John P. Chase, Inc. since 1932, and a trustee of the Chase Fund of Boston and Shareholders' Trust of Boston. John W. Powell Jr. is President and a director of the new corporation and serves as chairman of the board of Allied Research and Service Corporation. He is also a director and former financial vice-president of Harris Intertype Other directors include Wendell B. Barnes, Administrator of the Small Business Administration from 1955 to 1959 and now a senior associate with Shearson, Hammill & Co.; and Carl R. Hauers, senior vice-president of John Hancock Mutual Life Insurance Company.

The corporation intends to invest primarily in equity securities or securities with equity features of selected small businesses believed to possess attractive growth possibilities. The company will also provide advisory and management counseling services for small business concerns.

The corporation has an advisory board which will assist in technical evaluation of industries and individual small businesses. It includes Dr. Charles S. Draper, Head of the Department of Aeronautics and Astronautics and director of the Instrumentation Laboratory at Massachusetts In-stitute of Technology; Dr. Merritt A. Williamson, Dean of the Col-lege of Engineering, Pennsylvania State University, and a former manager of the Burroughs Corp. Research division; and Rulon Nagely, vice-president-material, North American Aviation, Inc.

Boston Capital Corp. will retain Allied Research and Service Corp., 75 Federal Street, Boston, Mass., its investment adviser and consultant.

Trapani Joins D. H. Blair & Co.

Ralph J. Trapani has joined the New York Stock Exchange member firm of D. H. Blair & Company, 42 Broadway, New York, as Manager of the firm's over-thecounter trading department. He was formerly with Goodbody & Co.

BANK AND INSURANCE Nadler Sees Improved Economy in 1961 STOCKS BY LEO I. BURRINGTON

This Week — Insurance Stocks

HURRICANE DONNA DENTS RECENT MARKET STRENGTH An abrupt setback in the strong market trend for fire-casualty stocks was the immediate result of this week's property damage lashing given by hurricane Donna as it stormed the Atlantic Seaboard. While considerable time will pass before the extent of damage by this catastrophe can be measured in claims upon individual company insurers, market psychology brought about a drop of 4 points in the stock prices of Home Insurance and Aetna Insurance; 3 point drops occurred in several issues, including Glens Falls. Insurance, Great American Insurance, Travelers, and U. S. Fidelity.

Insurance coverage of catastrophes, the chief reason for the livelihood of the fire-casualty business, is one of the main essentials of modern living. Hurricane Donna provided a harsh but clear-cut experience to the public that insurance companies stand ready to fulfill their roles of insuring uncertain risks. While in this instance the overwhelming publicity carries adverse implications for insurance companies, the lasting effect may well be one of arousing the public to seek more adequate insurance coverage. Another effect may be the direction of investor attention to firecasualty stocks as investment opportunities.

This group of securities often is ignored or forgotten due to stockholder difficulty in following performance of over-thecounter issues, the status of most insurance stocks. Once directed, such attention will reveal the positive market trend existing today for insurance stocks in contrast to the general securities market. On average, fire-casualty stocks, since the beginning of 1960, have registered a gain of approximately 5%, while the 500 stock Standard & Poor's Average, for example, has declined by some 5%. Several issues, of course, far outperform the averages. To date, market appreciation by Merchants Fire Assurance and U.S. Fidelity & Guaranty head the list of the representative stocks presented.

This sustained market action is supported by the trend of net premiums written (sales) which on average are running about 5% ahead of a year ago. By midyear impressive writing gains, in excess of 14%, were registered by Northern Insurance, Government Employees Insurance, Aetna Casualty & Surety and Ohio Casualty. The table presented includes, for comparative purposes, individual company gains in investment income. The investment earnings thus far are in line with the 10% rise estimated for 1960.

Fidelity & Guar. 43 40 - 29 1.00 2.2 35 Casualty Ins. 47 46 Tincreased cash dividend declarations during 1960. Improvement in first half of 1960 over first half of 1959.

As investment income improves, cash dividend increases can be expected, especially at this time since cash payouts remain under 50% of net investment income for fire-casualty companies as a group. Several cash dividend increases to stockholders already have been declared in 1960. Stock dividend declarations and payments this year have been made by Hartford Fire Insurance, Aetna Casualty & Surety, Government Employees Insurance, Insurance Company of North America, New Hampshire Insurance and Springfield Insurance. The most recent declaration is by Western Casualty, an 81/3 % stock dividend payable October 14 to holders of record October 3.

Thus far in 1960 acquisition activity includes American Surety Company by Transamerica Corp. and Freeport Insurance Co. by Springfield Fire & Marine Insurance. Two companies have publicly become merger candidates, Massachusetts Bonding and, more recently, New Amsterdam Casualty. Strengthening the trend toward life insurance with fire-casualty coverage are steps taken in 1960 by Great American Insurance, St. Paul Fire & Marine, and Glens Falls Insurance.

Overall underwriting experience, barring further catastrophes, should continue to trend upward due to higher premium rates in force, improved selection of risks and better expense control. Only seven of the issues presented are experiencing less profitable results. With investment income consistently improving, operating earnings for 1960 in excess of 25% over 1959 are expected to be the rule rather than the exception.

Investment Opportunities in Farmers Home Securities

Individuals, institutions and banks are reminded of current investment opportunities in the insured loan program of the Farmers Home Administration. About 2,000 banks and other financial institutions have invested in these insured loans in the past. Recent changes in interest rates have, of course, brought renewed interest in the FHA agricultural program.

Agricultural credit is of interest to facility and ease of committing a and bankers. It has particular sig-time. nificance for banks directly serving farm communities.

Among the financial institutions of the United States Department is the insured loan program of the agency. It offers an investment opportunity in one or more of three forms:

(1) Banks may purchase individual loan notes, fully insured by the full faith and credit of the United States Government. These notes average \$15,000 in size and carry a 4% return to the investor, with a five-year optional redemption period with an attractive renewal feature. These loans may be located in the area served by the bank and participation in the program would enable the banker to be of service to agriculture in his involved and with no servicing.

for the institution that wants the Treasurer.

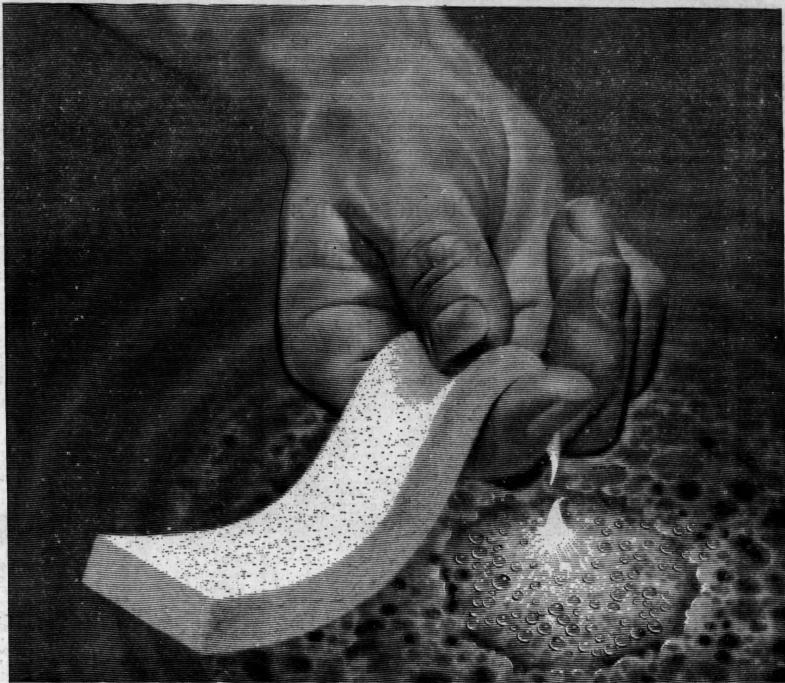

individual investors, institutions, sizable amount of money at one

(3) For short term needs a very substantial block of notes bearing 3% return to the investor is availassisting farmers with credit and able and can be delivered in any credit counseling is the Farmers amount up to \$35,000,000. These Home Administration, an agency notes may be redeemed at the end of 90 days or held for an addiof Agriculture. Of especial interest tional 12-month period, during which time they are readily marketable. These notes today are competitive in the short term market and have the flexible renewal option, a particular advantage to most investors. The full Government guarantee applies to these notes, as well.

Any lending institutions or individuals interested in investing funds in these guaranteed loans should write to the Administrator, Farmers Home Administration, Washington 25, D. C.

Relax let science make you comfortable

Some ordinary-looking liquids are mixed together. In minutes they react, and the mixture foams and rises to become one of today's finest cushioning materials—light, tough polyether foam. This is the magic of chemistry.

People everywhere are enjoying the restful luxury of this new foam. It can be tailor-made for any use . . . soft enough for the cushioning of your favorite chair or automobile . . . firm enough to give restful support in a mattress . . . or even firmer for the safety padding on your automobile dashboard. In thin sections, it's being used as an interlining for winter clothing and insulation for sleeping bags. And because it contains countless tiny cells, this foam in rigid panels makes a highly effective insulation for walls and refrigerators.

Many of the chemicals needed to produce these useful foams... polyethers to form the structure, fluorocarbons to expand the foam, silicone oils to determine the cell size, and catalysts to trigger the reaction... are created by the people of Union Carbide. Their continuing research in the ever-changing world of chemistry promises to bring many more wonderful things into your life.

Learn about the exciting work going on now in chemicals, carbons, gases, metals, plastics, and nuclear energy. Write for "Products and Processes" Booklet L, Union Carbide Corporation, 270 Park Avenue, New York 17, New York. In Canada, Union Carbide Canada Limited, Toronto.

THE MARKET ... AND YOU

BY WALLACE STREETE

hobble the stock market this week particularly when it appeared many desks bare in Wall Street, the strife elsewhere. Also keeping turn of 2½% on the common we thought this was a good opadded up to low volume and the followers of the coppers stock. Reynolds Metals, which has portunity to spend a week there. widespread disinterest.

54% during the normally slow summer month of August.

Steel production has been a drag on the well-being of the general economy all year, in part drink section is Canada Dry because of too-high hopes for a sharp upward bounce once last year's long-strike ended. Tied in record protit last year and a new so closely with another giant segment of the economy, the auto makers, the steel rate indicated that both are doing a bit less than record business to make it a double-barreled bar to any excessive market enthusiasm.

New Lows to Come?

The averages, toying with their year's lows instead of with even the highs of the trading rallies, illustrated the caution starkly and, by hovering within easy reach of the areas where support developed earlier this year, kept the subject wide open of whether the 1960 lows have already been posted or whether new ones are due. Considering the sluggish action of many key issues, including the steel and auto shares as well as the oil and rail ones, the possibility of new lows was little threat since they have been so well deflated already.

While the debate over whether the "market" looked lower or higher raged on, a growing number of market spectators were willing to settle for a trading market, reasonably stable, until the fate of the general economy through the fall and winter was more clear. They took comfort from the fact that, while there were trouble spots, the general level of economic activity continued on a high plane that hardly called for a raging bear market.

Well Protected High Yield

Then, too, individual situations of merit abound, not the least being the 61/2 % yield from Great Northern Railway. Whatever the final results, there is general agreement that the rail will cover its \$3 dividend by earnings running half again as much despite a decline in profit in the early portion of the year. The road is just entering the high-profit customers loaded up heavily preparatory to a strike.

Social Stratification and Right

Attractiveness of Ireland

By Roger W. Babson

The O'Dougherty Castle

The island which we normally think of as "Ireland" consists of two distinct divisions politically. The Republic of Ireland (Eire) comprises four-fifths of the area; its population is independent, and largely Catholic. Northern Ireland consisting of six counties is still a member of the British Commonwealth and is largely Protestant. It was settled chiefly by the Scotch.

The northwestern tip of this Protestant section is O'Dougherty country, which has the remnants a of a Castle which Mrs. Babson's sh was constantly in trouble. It was taken by the English some 40 ears after it was built; then the O'Doughertys got it back for about 40 years, and thereafter the occupany of it switched from one to the other. There is a lesson here which may apply to other countries where property has been seized by the Russians or other Communists. Although the O'Dougherty buildings were burned and the cattle and tools stolen, yet the title of the real estate finally returned to the original owners. This makes me feel that well-located real estate is one of the safest investments in this troubled world.

The People of Ireland

The people of Ireland are most courteous and warmhearted. They have laughter and humor as well as curious superstitions. They are known as chronic exaggerators, due to their kissing of the Blar-ney Stone! Both the men and women are healthy, athletic, and handsome. They are very trustworthy, God-fearing working people, charmingly graceful. In my travels over the world, I have never met more friendly or happier inhabitants.

Value of Pasture Land

Although Ireland is smaller in area than Pennsylvania, yet it has marvelous ocean frontage exceeding that of Florida. Some of this is meadow farm land extending down to the water; in other places there are high cliffs. As I worked up the West Coast and noticed this beautiful, unoccupied ocean frontage, I systematically took samples of the soil. These I will bring home with me and have analyzed. This land sells at a low price per acre and is fairly rocky, suitable, from our standpoint, only for pasturage. It also is difficult to purchase large tracts of thousand acres. However, I should think this land might be ancestors built 200 years ago. It an excellent investment for those with patience who are willing to visit Ireland once every other year and talk with those to whom they rent.

I was much surprised at the temperature of Ireland. I saw palm trees growing in the southern portion, and I was told that, due to the Gulf Stream, even the northern portion is seldom freezing cold. The Killarney Lake section in Southwest Ireland is beautiful, and many other lakes abound throughout Ireland providing fishing, hunting, and other

Other officers are Paul Johnson, Blyth & Co., Inc., vice-president; Larry Sisson, Pacific Northwest Company, secretary; and Robert Wight, Bank of California, N. A., treasurer.

FROM WASHINGTON ... Ahead of the News

BY CARLISLE BARGERON

the reports in the newspapers say, sponses to a tentative half-wave, but the fact is that the crowds followed by a gesture with both

siastic in Idaho and Oregon, but were inexplicably small and silent in Washington. And in Detroit, it was far below estimates. The Sen- nedy gives the impression of a ATHENS, Ga. — Albert M. Lord ator, eloquent and forceful at one young undergraduate making his is now with Courts & Co., 298 whistle stop on the West Coast, valedictory address, and wanting East Washington Street. sounded flat and bored at the next.

There were also the inevitable goofs, like the embarrassment at Pocatello, Idaho, when the candidate confessed he knew nothing about the Burns Creek reclamation project—a major local issue— and then added blithely that he had voted for it twice and would continue to do so.

But the reports that reached him from local politicians were generally on the optimistic side. Alaska, where he began his campaign two weeks ago, is now counted in his column. Idaho is regarded as an uphill struggle, but in other states he stumped—Michigan, Oregon and California—he thinks he is a possible and even likely winner.

It is important to note, however, that this optimism does not indicate a conviction that he will win any or all of those states. The current polls show him running behind Nixon in California and Oregon. Rather, it reflects belief that the Senator and his backers may have the capacity to do what must be done—to present the issues—to turn out the vote and to cope with this year's special problem of religion.

So far Senator Kennedy has defined the choice before the people in the broadest possible terms. Dynamic action with the Democrats, versus stand-pat stagnation with the Republicans and Vice-President Nixon.

He is trying to make it a party battle instead of one between Kennedy and Nixon. It is not that he and Nixon are alone running, he contends, but a battle between the Democratic and Republican parties.

This is good strategy. In 1952 and 1956 the Republicans did not win. Eisenhower personally won. The party lost in both House and

Kennedy has dropped his chant that this is a second rate nation, having found that was not going over so well. His contention now is that, if we don't take advantage of his dynamic leadership into the world of new frontiers, we will be surpassed. He wants to deal with the problems of the unemployed, the aged, the poor and the Negroes.

The dynamism he preaches is what Senator Kennedy himself projects most easily to his audience. With his jaw set and face uplifted, his right fist clenched, his voice straining, and the words tumbling out, he is a compelling figure in the spotlight.

He has a voice doctor accompanying him, but the doctor says Kennedy will pay no attention to him. He speaks almost altogether with his throat instead of using his whole diaphragm. This gives a constant trouble with his throat. But the intensity with which he screeches is appealing to his audience, particularly teenagers and

Unlike Nixon, he has not mastered the art of organizing and presenting a speech without the aid of notes. But he doesn't read his speech or make any pretense of it. He throws it away at the outset. What he lacks in clarity, however, he makes up in intensity.

The Command Guidance System for the Air Force Titan, shown here as the first and second stages separate, was developed by Bell Telephone Laboratories and is manufactured by Western Electric. Flight information is analyzed by a Remington Rand-Univac computer.

Nose cone of an Air Force Thor-Able test missile, guided by "brains" developed for the Titan, being recovered from the South Atlantic.

How the Air Force puts Titan on Target!

Bell Telephone Laboratories Command Guidance System gives deadly accuracy to new ICBM

Suppose you were asked to guide a 110-ton missile into space with a controlled velocity so that its nose cone could then sail free of all control and hit a tiny preselected target area 6000 miles away.

This was the objective for Titan which was given by the Air Force to Bell Telephone engineers and scientists. The result was a new Command Guidance System which guides Titan with "pinpoint" accuracy.

For the first few hundred miles of flight, a ground control center tracks the missile and sends instructions to keep it precisely on course. Commands are also sent to cut the engine off at the moment of proper velocity.

To show how accurate this guidance must be: at the time of cut-off, when Titan may be traveling some 24,000 feet per second, a difference of one foot per second in the speed could cause a miss of one mile.

The system has already guided missile nose cones so accurately that they could be recovered thousands of miles away by waiting ships. And it will play a key role in forthcoming satellite and space probes.

This new guidance system is the product of our many years of communications research and experience—which also help bring you the finest telephone service in the

Fuels Policy Proposal Analyzed

Rumblings of action to start a new National Fuels Policy with enduse controls prompts Empire Trust Co. of N. Y., in its recent "Letter," to plead for competition and not for controls. The way to obtain plentiful oil and gas, it warns, is not by creating monopoly markets.

Competition, not control, is the trols that could create artificial means by which U.S. energy needs obstacles to the hunt for oil, petrocan be met best at lowest cost and leum will continue to be abundant with abundance for the future. and low in cost," the Letter adds.

This belief is expressed in a In stressing that the coal indus-newsletter recently published by try itself is still strong, the Empire Empire Trust Co. of New York which discusses in detail the situwhich discusses in detail the situation created for the energy fuels

o.

Henry C. Brunie, President of Empire Trust, in an introductory paragraph to the Letter, says that behind these attempts are serious implications to interfuel competition and to freedom of consumer choice. . . . An informed public will support competition, not restraint, as the key to this nation's continued prosperity."

The Letter points out that "today low-cost energy largely means petroleum. Petroleum means oil and natural gas. We get almost three-quarters of our energy from petroleum, most of the rest from

Says Controls Would Mean Monopoly

A policy of end-use controls on energy fuels "could deny all consumers — industrial, utility and residential—their right to burn oil or gas for any purpose for which coal could be substituted," the newsletter declares. "End-use controls thus establish monopoly markets, restrain competition and tend to eliminate competitive pricing when they eliminate the freedom to sell and the freedom to buy."

Continuing, the Letter points out that the "nub of the agitation for a new National Fuels Policy is the old prediction that our petroleum is running out faster than our coal. It was said that we'd run out of oil and gas, first in 1925, then by 1941, more recently by 1960. . . . Fortunately, no genuine oil scarcity ever has occurred. Right now our proved oil and gas reserves are at an all-time high."

The Letter calls attention to the fact that just recently the ultimate oil resources in continental United States recoverable by current methods were estimated by the U. S. Geological Survey at 235 billion barrels. "This represents nearly four times the total oil production since the start of the American petroleum industry" 100 years ago, the newsletter adds.

Coal resources, on the other hand, amounted to 3.5 trillion tons in 1918; by 1958 economically recoverable coal had shrunk nearly 50% to 906 billion tons, according to the Empire Trust Letter.

"When weighed in terms of price competition from competing fuels, other estimates have scaled down even this figure to as little as 30 billion tons," the Letter says. "Present coal production is at the rate of about 425 million tons per year.

"There hasn't been a 10-year period in which we have not produced petroleum approaching all of the proved reserves at the beginning of that 10-year period and at the same time ended the 10 years with still greater reserves," the newsletter adds.

"Thus it is difficult to see how this nation is in danger of running out of oil and gas," the newsletter continues. "The problem is to locate what we know is there.

"So long as the nation avoids tax policies and restrictive conmand for coal will increase 75%, Banks for Coops.

"America must guard against offer Debens. efforts to sacrifice the public interest for the sake of creating."

The Park terest for the sake of creating mo-nopoly markets," the newsletter "The truly positive approach is through the traditional policy of creative competition upon which this nation has thrived."

Steel for automobiles: another area of growth at

ATIONALSTEEL

one of its biggest years. Production will run about 11% more than in 1959. And the persistent increase in number of families, the move to the suburbs, the growth of multiple car households all point toward a steady and substantial increase in the demand for cars . . . and the steels of which they are made.

National Steel has long been identified with the automobile. The automotive industry is America's biggest customer for hot and cold rolled sheets and strip and our Detroit division, Great Lakes Steel Corporation, has consistently supplied a major proportion of these requirements.

In addition to its dramatic growth as a steel consumer over the years, the auto industry

now completing has constantly provided a fertile field for fastest and most powerful strip mill and the new steel products. Great Lakes Steel and also our Weirton Steel division of Weirton, West Virginia, have worked closely with auto makers to meet this need for the new. Weirton, for example, recently developed differential-coated galvanized steel to solve a special automotive problem, and much greater use of galvanized, in this and other forms, is plainly indicated for the future. In such ways, we have grown along with the auto industry and we will continue to do so. This is one of the principal aims of our current \$300,000,000 expansion program. For Great Lakes Steel, it includes a substantial increase in steelmaking capacity and the "mill of the future"-which will begin operation in 1961 as the world's

first to have an electronic computer incorporated in its original design. Its assignment is to meet peak demands of the auto industry with the finest quality steel yet produced.

So, automotive steel is another important area of growth in which National Steel Corporation, in cooperation with its customers, concentrates its long experience in steelmaking and its research facilities on exploration of new ways to future progress.

This STEELMARK of the American steel industry tells you a product is steel-made, steel-modern and steelstrong. Look for it when you buy.

The Favorites

Yet a spot check of the 50 most has begun a steep climb, reaching favored stocks of financial institute 27th slot. tutions discloses that companies in these bread-and-butter industries remain high on the roster by comparison with a year ago or even two years ago.

Thus, going back to 1958, it will be found that of the 15 top favorites of investment companies, common trust funds and insurance companies, no less than seven were oils. A year ago (Standard of Indiana) had fallen out, which left a highly respectable six among the first 15. Now Stano-lind is back in the 15th spot to restore the total to seven. The other six are Standard of Jersey, far and away the No. 1 favorite among stocks of all kinds; Texaco, which is sixth in the over-all compilation, and Socony Mobil, Phil- years ago to 47th. lips Petroleum, Standard of California and Gulf Oil.

there were only two steels among the top 50, U. S. Steel, which has been acquiring investment status years ago and now 37th. year and now is tied with Socony 34 and now to 28th.

Indeed, it would appear that It's out again, ranking 53rd. there has been no urgency to unlock strong boxes these past couple of years as the first five among institutional favorites show no change in ranking. Behind Standard of Jersey are General Motors, General Electric, American Telephone & Telegraph, with E. I. duPont de Nemours & Co. still in the fifth slot.

Interestingly, America's pre-mier growth stock, International Business Machines, continues to move up in this select group. Carrying, by far, the highest price tag of the favorite 50, I. B. M. has come from No. 17 in 1958 to occupy the 12th position. It could work its way into the top 10 in

Probably the most impressive performance of all, however, has been turned in by Westinghouse Electric. After all, I. B. M. never did lose its halo. But a few years ago Westinghouse was dubbed the "Ailing Giant." But plainly Wall Streeters regard the company as completely recovered these days. From No. 27 in 1958, Westinghouse rose to 19th last year. At latest Philip A. Batchker on Sept. 15

took a severe shellacking and left to be a limited partner.

It is scarcely a secret that oil a train of unhappy stockholders. stocks have had few friends dur- Indeed, the number of shareing the last four years despite holders shrank steadily. But now scattered recommendations by fin- seasoned Ford has attained in- Inc. nancial district counselors to "Gas vestment status. From 44th two up!" Joining this fraternity of the years ago, it fell to 47th last year. friendless in 1960 were the steels. During the last year, however, it quarterly dividend of 11 cents,

> Utilities have woven a crazy quilt, with hard-headed investors showing considerable selectivity. Thus, American Electric Power, the most favored in this group, which was No. 19 two years ago and No. 18 in 1959, now is 20th. On the other hand, Common-wealth Edison has fallen from 15th in 1958 to 20th in 1959 and now is 24th. Texas Utilities has gone over the same span from 28th to No. 33. Southern Company makes the best showing in this division. It wasn't even among the top 50 until this summer. At latest report it was 49th. United Gas Corp., on the contrary, has slipped from 35th two

Outside the utility division, other disappointments have been Returning to 1958, we find that Aluminum Co. of America, which has been falling steadily and now is 44th, and Monsanto, 30th two

the past few years, and Beth- Viewed in the round, the pic-lehem. Big Steel moved from No. ture is not greatly altered. Two the same span from No. 37 to No. Union Pacific just did manage to make the grade by coming in 50th.

> Swiftly working its way into the charmed circle is Merck & Co. That top-flight drug was 85th two years ago. Last year it was No. 66. Now it has only two rungs to climb to become one of the top 50.

> Incidentally, if we rank the fa-vorites on the basis of investmentcompany holdings alone, some striking differences do emerge. Thus, while Standard of Jersey and G. M. cling to the first and second spots even on that basis, the third-ranking issue is mighty I. B. M. Texaco is next and G. E. rounds out the Big Five.

As for U.S. Steel, which finishes eighth on an over-all basis, it comes in seventh on the basis of reporting investment companies exclusively.

All in all, it would appear that, even though many of the breadand-butter equities have been sold on balance, there has been little tendency to engage in wholsale liquidation.

Funds Report

B. C. Morton Organization has become underwriter of Peoples Securities Corp., and a stockholder in A. S. Karasick & Co., Inc., investment manager of the growth stock mutual fund.

Irving Trust Co. has been appointed registrar of the common stock of Guardian Mutual Fund,

Fidelity Fund, Inc. declared a payable Sept. 24 to stockholders of record Sept. 7.

Keystone Discount Bond Fund, Series B-4, and Keystone High-Grade Common Stock Fund, Series S-1, declared regular distributions from net investment in-come of 29 cents and 21 cents, by the Clyde Williams Investment respectively, both payable on Sept. 15.

"While the economy is not booming and standard economic indicators are conflicting, the stock market's own internal action is developing strong indications that it is preparing for a significant advance in anticipation of improving business conditions," Harold X. Schreder, executive vice-president and economist of Group Securities, Inc., said at a meeting of investment representatives at the 12th annual Mutual Fund Dealer's Conference.

The 1960 record high plateaulevel of overall business and the stock market has masked a tremendous amount of divergent and corrective activity in the nation's 16 in 1958 to the 10th spot last years ago—as now—there wasn't various industries and individual year and now is tied with Socony a single railroad among the stocks," said Mr. Schreder. "In for eighth. Bessie has gone over favored 50. Last year, however, fact," he added, "this prolonged divergence in business activity and the stock market has been going on since 1955. For example, 1960's two major 'soft' industries -steel and automobile-have not been able since 1955 to exceed their record production levels of that year."

> "Desire for income is the most fundamental of all investment motives," according to Fred E. Brown, President of the Broad "Investment fads sweep the scene," he said, "but, if experience is any guide, we know that investor interest in such fads eventually is carried to excess only to ebb away. Interest in income, on the other hand, carries on steady and undiminished. Characteristically, the income motive is the most constant under all kinds of conditions; it is the most appealing to the ladies, who increasingly control our nation's wealth; the greatest need of younger people, the prime objective of future planners. Moreover, income is equally important to the potential as to the present inves-

Mr. Brown made his comments -Policies, Problems and Pitfalls Broad Street Sales Corporation for a gathering of mutual fund dealers and their representatives. Broad Street Sales is general distributor of the Broad Street Group -Broad Street Investing Corporation, National Investors Corporation and Whitehall Fund, Inc.

"All we know for sure about the economy in mid-September is that there will be a long period of growth for the United States in the years that lie ahead," according to Dr. John W. Harriman, economist for the Broad Street Group of Mutual Funds.

"We will know more about monetary aspects when the elec-tion is over. We will know more about the character and timing of the next cyclical upturn as the year 1961 unfolds. But regardless of whether there is a continuation of the uneasy and uneven plateau we have been experiencing or a

moderate recession in the shortterm future, the outlook for the longer term is favorable."

The economist made his comments to a gathering of mutual fund dealers and representatives at a seminar in Washington, arranged by Broad Street Sales Corporation.

Investments in electronics companies are expected to absorb a sizable proportion of the assets of Techno Fund, a small business investment company that "went public" recently, according to Dr. Clyde Williams, Chairman of the Techno Fund board.

The fund already has invest-ment interest in the National Resistance Corp., and is expected to make equity loans to several other small electronics firms in the near future.

Management Co., of which Dr. Williams is President.

Total sales of shares of George Putnam Fund and Putnam Growth Fund during August, amounted to \$4,013,000, an increase of 89% from August a year ago. For the first eight months of 1960 com-bined sales of the two funds totaled \$33,526,000, an increase of 96% from 1959. Redemptions increased less than 12% for the same period.

Combined total net assets of both funds reached an all-time high of \$260,785,000 on Aug. 31.

Phila. Inv. Women Announce Officers

PHILADELPHIA, Pa.—The Investment Women's Club of Philadelphia which played an important role in establishing the "Invest in America Week" program, has announced its officers for the 1960-61 season.

Miss Dolores Dougherty (Bishop and Hedberg, Inc.) has been elected President of the group. Vice-President is Miss Elizabeth A. Booth (A. Webster Dougherty & Co.). Named Secretary is Miss Katherine Merscher (The Phila-Street Group of Mutual Funds. delphia National Bank). Serving as Treasurer for the coming season is Miss Joan M. Brown

S. D. Fuller & Co. and associates offered on Sept. 14, 191,667 shares of the common stock of Harvest Brand, Inc. at a price of \$6 per share. Of the total number of shares offered, 150,000 shares are being sold by the company and 41,667 shares by certain selling stockholders. The sale marks the first public offering of the company's stock.

Proceeds from the issue will be used by the company to retire notes payable and other indebtedness; to establish a new automated plant and geographically diversified branch plants and distribution centers; and for additional working capital.

Harvest Brand, Inc. is engaged in the business of formulating, manufacturing, distributing and selling feed supplements, minerals and pre-mixes for the livestock industry. The Pittsburg, Kansasbased company operates principally in the Midwest. The company's products are marketed under the trace name of "Stockade," which is widely known among livestock feeders in the Midwest. Used in simple or complex type mixes to supply minerals, proteins, vitamins and drugs, Harvest Brand products are manufactured in loose or block forms.

Upon completion of the financing, outstanding capitalization will consist solely of 375,000 shares of common stock.

For the five months ended May 31, 1960, the company had net sales of \$793,302 and net earnings of \$47,683, equal to 21 cents per common share on the 225,000 shares then outstanding.

Stretching from country to country, these wires hum with activity. Today there are over 70 million phones in the United States serving homes and industry. They are a vital part of our everyday life. there's more to Cities Service than meets the eye!

It's easy to make a telephone call . . . or so it seems. But take a look at all-that's behind this modern convenience.

For instance, to take care of the more than 4,000,000 New York City phones and over 17,000,000 necessary miles of wires and cable requires over 60,000 people. Meanwhile, 7,000 scientists, engineers, and technicians are at work in this one metropolitan area seeking ways to improve the phone system.

The same holds true for the petroleum industry, too. It's a simple thing to drive in to a friendly Cities Service station, say "Fill 'er up" and drive off with a tankful of high-quality gasolene.

But to make that possible, thousands of people are at work on five continents, utilizing the most modern facilities of exploration, production, transportation, refining,

research and marketing. The investment required has exceeded a billion dollars. And to improve and expand these facilities, millions more are being spent.

Only in this way can America be given what it needs for progress-more jobs and better petroleum products.

Puerto Rico's Tax Exemption Program and U.S. Investor

Continued from page 9

tory requirements. The section provides that a domestic corporation shall be subject to United States tax only on that, part of its income which is derived from sources within the United States of at least 80% of its gross income is from sources within a possession of the United States and 50% or more of its gross income is from the active conduct of a trade or business. Puerto Rico is treated as a "possession" for this purpose. The statutory requirement that

80% of the gross income of the corporation be derived in effect from Puerto Rico creates two dif-ficulties: In the first place, section 931 provides that payments ac-tually received in the United States are to be included in the taxable gross income regardless of the source from which derived. Thus arrangements have to be made for the actual receipt of income in Puerto Rico, although once received these monies may be transferred immediately to a mainland depositary.

Apportioning Formula

The real difficulty arises under section 931 in the case of a corporation which plans to manufacture in Puerto Rico but sell a substantial part of its output on the mainland. For purposes of de-termining its geographical source, the resulting income is apportioned under a complex formula partly to the manufacturing, which clearly has a Puerto Rican source, and partly to the sales activity, which may well have a source within the United States. The source of the selling element is the country in which the goods are sold. As stated in the Regulations, the sale takes place at the time when and the place where the rights, title and interest of the seller in the goods are transferred to the buyer. This is the so-called title passage rule, under which point of passage, where the risk of loss of the goods shifts from the seller to the buyer, is a matter of the intention of the parties. This intention is normally expressed in the contract of sale. Thus a contract f. o. b. San Juan calls for delivery to the buyer at that point; title to the goods passes at that point; and under the title passage rule Puerto Rico is the source of the income from the sale. Conversely, delivery is made in the United States if the contract is f. o. b. New York.

The title passage rule is quali-fied in the Regulations by the statement that it will not be followed where the sales transactions has been arranged in a par-ticular manner for the primary purpose of tax avoidance. This long standing qualification really expresses the dissatisfaction of the Treasury with the rule. This dissatisfaction is due in part to the fact that the broad coverage offered by insurance companies today has greatly minimized the business importance of the point at which title passes. There are several cases pending in which the Treasury is again urging, despite its lack of success in the past, that the source of income on sales transaction should not necessarily turn on the place where title passed. Instead, the Treasury is urging that the place where the sale was negotiated is the place where the substance of the transaction took place, and hence the source of the income.

The risk of this uncertain state of the law to a domestic corporation under section 931 is that part of the income attributable to the selling side of the business may be assigned to United States sources in an amount sufficient to disqualify all of the income of the corporation from the benefits of section 931. In this regard, it will be recalled that these benefits

apply only if at least 80% of the gross income of a corporation is derived from Puerto Rico.

In the case of a Puerto Rican corporation, the question of where title passes and the status of the title passage rule for determining the source of income are very much less important. If the corporation is not engaged in trade or business in the United States, then, as in the case of other foreign corporations, no part of its gross income from manufacture and sale will be subject to United States tax, even though part of that income may have a United States source. The reason for this

This risk offering the ultimate advantage of Code, apportion part of the sub- does not extend to a Puerto Rican corporation.

Period

In discussing the benefits of the Puerto Rican tax exemption program, it may be that we overemphasize the attraction of a taxfree liquidation before the end of the exemption period. The success of the business enterprises already established in Puerto Rico by mainland investors suggests that in most cases the investor will prefer to continue the business beyond the exemption period. In these cases the great advantage of ical income from United States product to its parent or an affili- from distribution of the goods in the program is that it provides sources, and gains on the sale of ated corporation on the mainland. the United States. Europe Termed High-Cost Food Producer

Chase Manhattan Bank recommends to Europe a farm policy that includes importing more food and releasing labor inefficiently used on farms to industry.

The six nations of the European Common Market have not yet solved their basic agricultural problem. Economically speaking, there are too many farmers, too many farms, too much inefficiency, too many controls, and too much protectionism in agriculture on the Continent. This opinion is expressed by Report on Western Europe, The Chase Manhattan Bank's bimonthly survey, in the latest issue, published Tuesday, Sept. 13.

The six governments are now considering proposals for a com-mon agricultural policy presented during the summer by the Common Market Commission. These proposals are an attempt to grapple with farm problems of the six countries on a European scale, the bank publication points out.

"A common agricultural policy would have great economic sig-nificance, both to the Common Market and to the rest of the world," says the Chase Manhattan report.

"Within the Common Market, agriculture accounts for 13% of total production and employs roughly one quarter of the labor force. To other countries, the Six together represent the world's largest market for agricultural

As a high-cost producer of food, says Report on Western Europe, "the Six could, with great economic dividends, import more foodstuffs and gradually shift resources from some lines of agriculture to industry where labor is in short supply. In short, the real problem is not only to strengthen but to shrink the base of agriculture in the Six over the long term. There are great political problems in putting through such a program. But, to the degree that the Commission's agricultural policy leans in this direction, it will favor the over-all interests of the Common Market."

pattern will assume a more deaccomplished through the direct purchases of Government securities (the short-term liquid issues) by the Federal Reserve banks or serve Banks.

Lower Rates Possible

However, there is a limit as to the amount of ease that might develop in money and credit, because of a downturn in the economy. It is evident that the so low that we will be faced with a wholesale withdrawal of foreign funds through the medium of gold being taken from here.

Nonetheless, money rates could go lower than they are now before gold will be leaving here in bond coming due on Nov. 15, 1998. sizable amounts, in the opinion of many money experts, because foreign Central Banks, the largest The refunding operation will be owners of funds here, will not pull out their balances because offer by the Treasury as the dollar remains a sound curlower interest rates due to a more

continues to go ahead at an increasing rate with Governments, corporates and tax-exempt issues getting their proportionate share of this money. At the present time it is evident, however, that the non-federal securities are getting larger amount of these funds than are the Treasury obligations because the yield in the former issues is more favorable.

Equity Money Going Into Treasury Issues

However, a not insignificant amount of funds is being put to work in selected Treasury securities, ranging from the near-term issues to the most distant maturities. It seems as though common stock monies are being invested in Treasury bills and intermediate-term obligations with the World War II 21/2% bonds being among the leading issues being bought by this group.

Commitments in the longerterm Government bonds seems to center mainly around the 4s of 1980, the 31/4s of 1985, and the 3s of 1995, which appears to indicate that, in addition to pension funds, there are also purchases being made by those institutions which have in the past put most of their monies into equities. This movement of common stock funds into selected Treasury issues could build up with a defensive tone to the economy.

According to advices, the intermediate-term Government issues with the highest discounts appear to be attracting the type of buying which is believed to be interested in trading these securities with not too much of a price movement. In other words, it looks as though a (stock) trading group is becoming interested in selected middle-term maturities.

What are the prospects for the we would have to conclude that into action. the pickup this fall and winter might be less than seasonal and that we are near a period of receding business. Most of these leading indicators reached peaks during either the second quarter of 1959 or the fourth quarter of 1959. But during the second quarter businessmen were frantically preparing for the steel strike and during the fourth quarter they were frantically trying to make up for lost time. If this is true then we should discount to some extent the story that these indicators usually foretell, but we cannot dismiss them.

On the other hand, most inventories are low in relation to sales, capital spending continues have been far below steel consumption, indicating that either steel production must soon go up rather drastically or consumption must decline abruptly.

During the past 18 months the Federal rate of deficit has changed drastically to a Federal rate of surplus but now this radical and depressing impact of the change the economy is behind us. Changes the next few months will be moderate. Treasury cash operations were running at a seasonally adjusted annual rate of \$6 billion deficit in July of 1959 and a seasonally adjusted annual rate of surplus of \$7.2 billion in July

of this year.

Prices

Inflation is a vicious monster -but to so many of us she is a secret but fascinating flirt. We inveigh against her to our friends but when they leave, we call her for a rendezvous. We think we can beat inflation, and some of us do. Inflation would not be a problem were it not for the fact that so many of us secretly want stable prices for the other fellow's product, but want rising prices for our own product. It would be so nice for our salaries to go up each year while the prices we pay remain static. For most of us this can be only a dream. But dreams are made of potent stuff and no wonder we force our candidates at a high rate, and steel operations to promise us that (a) they'll provide us with many things, and (b) it really won't cost us much. There has been an unmistakable bias toward inflation. Most of us need only a mirror to see who really is to blame.

Good management dictates that we deliberately operate with a deficit during a recession and a surplus during good years. History tells us that since the War we have had about three good years for each bad year. You'd think then that during the past 12 years we'd have had a net surplus in the aggregate.4 We didn't! We ran short in respect to our official budget by \$33 billion or an average of nearly \$3 billion per year. We must do better during the next

But business and labor are also to blame for inflation. Because the biggest single cost of doing business is labor cost, I suppose we must conclude that the biggest single cause of our inflation has been the fact that in the aggregate wages have consistently risen faster than productivity. Some of our businessmen also have been at fault. Some price increases are not justified and thus not in harmony with the businessmen's own long term interests. There is featherbedding in both labor and

time since 1946. Many business- ent, when prices are temporarily men now have the knowledge and stable. the opportunity to make a major contribution toward economic stability - and in a way which is compatible with, and even con-tributes toward, their own self interest.

Symbolic of the more progressive planning was a statement SACRAMENTO, Calif. - Thomas attributed to Roger Blough, Chairman of U. S. Steel. When asked if he planned to curtail capital 1200 J Street. He was formerly expenditures in view of the then existing steel production rate of about 50% of capacity, he answered, "If anyone really wants to make capital expenditure dollars go as far as possible, now is the time to do it . . . and with our reduced operating rate there is less interference with production when we install equip-

A similar improvement in planning is required for inventory purchases. These are the challenges for you businessmen. A major cause of recent cycles has been erratic and ill-timed business purchases. An improvement in our general economic stability is in part up to the businessmen. Everyone would profit.

Inflation Yields Unemployment

The solution to the price problem (and the political dilemma connected therewith) lies in part in the necessity to recognize the truth of this equation. Purchasing power does not rise evenly among all groups. Continually rising prices may cause us to price ourselves out of some foreign markets (\$17 billion), then a portion of the retired citizen market (\$30 billion), followed by a portion of the schoolteacher market (\$7.5 billion) and so on. After each step we need fewer workers to supply the goods and services for these groups, and workers may be furloughed. If the process moves far enough and fast enough, at worst it means catastrophe. If it moves slowly it will at best surely retard economic progress. If enough of us ask more of the economy than we put into it, we may find even ourselves among the unemployed. Think of the benefit to all if this point were put across to the electorate!

In spite of earlier inflation, we have in general enjoyed stable prices for the past year and a half. Consumer prices have slowly edged upward, wholesale prices have been steady, and raw material prices have gone down.

How about future prices? The responsibility rests upon all of us. There are now relatively few shortages of capacity. There are scarcely any areas of the country where there are critical shortages of labor, although there is a moderate shortage in several cities (but there is a critical oversupply in others). The budget is in balance. Recent wage contracts have been inflationary in nature but not so much as in earlier years. What we've been having is almost the ideal—a reasonably high level of prosperity along with reasonably stable prices. Based on the foregoing facts, it would seem reasonable to expect reasonably stable prices for the near-term future—say for the next year. The tendency may be for only a slight

But how about the prospects for the longer-term? I believe the people are becoming more literate on the subject of inflation. I believe they have some doubts about having their cake and eating it too. But I also believe that many of the pressures are still there and that most of us at least partially believe we can take more from the economy than we put into it. Unless we become completely convinced that inflation is the road to unemployment, the outlook during the next five years will be for rising prices with some interim periods, such as the pres-

Outlook for Rebuilding Savings via Life Insurance

Continued from page 3 duced the financing of a sound growth.

The Growth of Saving Through Life Insurance

The principal channel of saving by the American people in the past 60 years has, of course, been life insurance. During that period, over \$106 billion of savings have been accumulated through the channel of life insurance. The figures are that in 1900 the savings accumulated by the American people through life insurance amounted to the modest sum of \$1.7 billion. At the end of 1959, accumulated life insurance savings had risen to \$108 billion.

The tremendous growth of saving through life insurance is, of course, partly the product of a growing national economy. One would naturally expect life insurance sales to increase as the economy expands. More important, however, and easily overlooked, is the great contribution which the productive investment of life insurance funds has made to the growth of our economy. Let me illustrate how the life insurance business has contributed to economic growth.

The 12 years since 1948 have witnessed a great burst of growth, and our business has been a vital factor. During this period (1948-1959, inclusive), American business and industrial corporations have borrowed net new money amounting to about \$53 billion in order to aid in financing new plant and equipment and for working capital. Of this total, nearly \$29 billion was obtained from the life insurance companies of the country. In other words, 54% of the net new money obtained in the capital markets by business and industrial corporations to finance their expansion, modernization, and working capital requirements in this period came from life insurance companies alone. About 70% of these funds went to business and industrial firms, with the remainder going to public utilities, and in small measure the railroads. Please note that I specifically mentioned the net new money supplied by life insurance companies to business and industry. Actually, due to repayment of existing loans by corporations, the life insurance companies actually made a much larger volume of loans to business and industrial corporations in this period. We have reliable figures which show that in order to increase their holdings of corporate bonds by \$29 billion during 1948-1959, the life insurance companies actually purchased something like \$85 bilthese funds were invested imaginatively by the investment offiour industrial investments.

But it would be a mistake to think that the investment of life insurance saving—and the contribution to economic growthhas been limited to the purchase sitory or whether it is a lasting of the bonds of business and in- trend. dustrial firms. During the same period, 1948-1959, the life insur- During the first five decades of of inflation discourages saving in ance companies added to their this century, the amount of sav- traditional forms and promotes holdings of mortgages on business ing accumulated through life in- speculation in equity investments and industrial properties, and surance tended to double every such as common stocks and real apartment buildings, in an amount decade. have been employed to build office buildings, warehouses, de-partment stores, shopping centers, and many other commercial and industrial facilities which have meant so much to the growth of the country. It is largely through this channel that life companies have provided millions of dollars of financing to small business

Perhaps most interesting is the enormous contribution which life insurance savings have made to better housing of our people, which certainly improves our productive capacity as well as our living standards. During these past 12 years the life insurance companies have expanded their holdings of mortgages on 1-4 family houses in an amount equal to \$20 billion. In other words, about 20% of the total increase of \$103 billion in home mortgage debt in the country as a whole during this period has gone to life insurance companies. But this again really underestimates the total impact of life insurance companies in home financing because it does not take account of amortization of mortgages and other mortgage repayments. We have reliable information which shows that since 1946 the life insurance companies of the country have actually made about \$46 billion of home mortgage loans, of which \$13.5 billion have been FHA-insured loans, \$10.5 billion have been VA-guaranteed loans, approximately \$22 billion have been uninsured home loans. Just think of what this means! If we were to assume that the average mortgage loan during this period was \$10,000 (a reasonable assumption), the life insurance companies provided the financing making possible the purchase of by 4,600,000 American

These, then, are the principal ways in which the life insurance savings of our people have provided the financing of sound eco-The same is true of direct investfacilities, and many other invest-

55,000

Carloads Worth of **New Industry Located Along** Coast Line Last Year!

The 218 industries that were developed along Coast Line's tracks last year will provide an estimated 55,000 carloads in extra shipping business during 1960. The number of new industries is an increase of 79 over 1958, and reflects the impact of our intensive campaign to interest industrialists in the Southeast Coastal 6.

Our skilled staff of industrial development specialists, including geologist, foresters, and agricultural experts, provide a genuinely valuable service to expanding industry. In turn, the communities served by Coast Line benefit from the additional jobs, payrolls, and local trade created by industrial growth.

A close relationship—as partners in progress among industry, Coast Line, and the states and communities in the dynamic Southeast Coastal 6 is sure to pay off for all in years to come.

> "Thanks for Using Coast Line!"

AS WE SEE IT Continued from page 1

which such an astounding result was obtained for the purpose of determining whether the figure could be accepted as even half accurate. An "average rate of growth in this country" is itself somewhat of an enigma—the rate depending upon disputed concepts of growth and of rates and of how they are to be computed, but it is perfectly obvious that even if some "average rate" of growth is stipulated, an infinite number of different pecuniary effects might well be felt by individual working men to say nothing at all about "every working man." We can only hope that if not "every working man," then at least most working men in this country will know how to appraise such statistical balderdash.

But the candidate has other use for this rate of growth idea, which as is well known has taken firm hold upon labor union leadership in and around Detroit. "With a really healthy rate of growth," he tells us, "this country can have full employment for all who want a job; with a really healthy rate of growth we can pay for all the defense that this Administration said we can't afford. With a really healthy rate of growth we can afford the best schools for our children and the best-paid and the besttrained teachers. And, finally, with a really healthy rate of growth we can talk about an economic crusade for justice." To the Senator it seems that all our economic problems are very simple. All we need is a "really healthy rate of growth," and, of course, the candidate, if elected would, we are assured, see to it that such a rate of growth is attained, which a President can do, apparently, by merely setting "before us our national goals.

But the Senator is convinced that still other political nourishment is to be wrung from this rate of growth buncombe. For that purpose he lists three "facts"—some of which are as doubtful as his \$7,000 gem, and all of them grossly misleading if taken out of their context. The "facts" are:

- (1) "Our economy, under the first six years of the Republican Administration, grew one-half as much as under the last six years of the Truman Administration.
- (2) "The Russian economy is growing at three times
- (3) "Last year the United States had the lowest rate of economic growth of any major industrialized society in

Now we wish we could be sure that there was no need to point out again for the thousandth time the major fallacies of such "facts," but perhaps it is better to present once more, at the risk of boring the reader, some of the major weaknesses of this type of reasoning. As to fact number one: The last six years of the Truman Administration were years immediately following a devastating world conflict when consumers the world over were starved for all sorts of goods and this country felt it its duty to send billions of dollars in goods free of all charge to many stricken areas. They were also years immediately after an enormous inflation of the currency and credit, largely incidental to the conduct of the war. The candidate does not take the trouble to mention the fact that prices consumers had to pay for what they bought rose 25% during the six year period—and that after an increase of some 18% in the single year immediately preceding the six year period. All this without reference to the very questionable concept of economic growth as the increase in total output—a subject which we have more than once discussed in these columns.

Those Russian Figures

As to "fact" number two, how does the candidate know what the rate of growth is in Russia? Does he accept the figures handed out by the Kremlin? Does he include all sorts of production, or only those for which official figures are readily available—that is industrial output? Does he make any allowance at all for the different stage of industrial and economic development in the two countries? Is he, or his statistician, not aware that the smaller the point of beginning, the larger any given amount of increase will be when presented in percentage form? Is he, or his statistician, ignorant of the fact that industries or nations, like animals, tend naturally to grow faster when younger — that is when stated in the form of a "rate"—than in the later years? Is it not about time we put an end to all this statistical nonsense about Russia and its growth in recent years? Their progress has without doubt been great, greater in certain limited fields than has ours, but let us keep our statistical computations within reasonable bounds.

As to "fact" number three, let it be said without waste of words that the "rate of growth" over any one year period makes no sense. Changes in total production -which the candidate's statisticians use as synonymous with growth—vary enormously from one year to another. It is what is now so glibly referred to as the "business cycle." Such short-term changes are not "growth" in any real meaning of the term, but the usual and inevitable ups and downs of business.

Senator Kennedy is a victim of growthmanship, and its many, many quirks and serious fallacies. So evidently is his party. So also is labor union leadership. Which doubtless accounts for this elaboration of nonsense on Labor Day in Detroit. But may kind Providence save the rest of us from such buncombe!

Achieving Real Growth and Preserving Our Way of Life

Continued from page 1

toward a larger and larger government with an ever broadening are thinking primarily about inscope of operations. Party plat-forms and speeches by the Presidential candidates seem to indicate at the very least, that the drift is going to continue. Such a drift makes more acute the necessity for reappraising what the role of government should be in an economy such as ours. We must not, in my opinion, so change the role of government as to jeopardize our basic strength.

Before we alter too much or discard the system we have, let us note first that the United States of America today has the highest standard of living of any country in the world. Let us note second that no other country can match ours in the broad diffusion of its living standard to so high a percentage of its populace. And let us note third that our present and past record of outstanding productive achievement—on a scale not even closely approximated by any other country was made with an economy that was relatively free of government planning and dominance. All this was attained with a measure of individual economic freedom unmatched anywhere on this globe. This we should never forget.

Expects Increased Federal Spending

Nevertheless, it is only realistic to expect some increase soon in governmental expenditures on the Federal level, in response to the demands of those who insist that growth should be stimulated by expanding public spending. That being the case, thoughtful leadership must insist that such spending should be directed into chanthat stimulate increased growth; and that those non-essential Federal expenditures that are not conducive to growth, should be avoided and eliminated.

of what expenditures are condugrowtn; growth to happen. The answer depends upon a lot of things but mainly upon how best to develop and utilize available human, natural and man-made resources. They key to growth is how our nation gears itself toward investment for the future; since economic growth and progress depend primarily upon investment for the future. And the higher the growth rate that is sought, the the amount of investment is correspondingly needed.

But Not Any Kind of Spending

When it is said that to accelerate growth we need increased investment, a broad definition of investment is presupposed. There should be included first what is usually included in investmentas surely an investment in the ernments.

future as are expenditures for plant and equipment. Here, we vesting in education and in research and development.

My concern is not only with inbut also with enhancing the form can make to growth. In short, of it. To raise productivity our emphasis should be on promoting contributions by ignoring wastes zational advances. When such a without promoting inflation. policy is followed in the acquisition of new capital goods and is complemented with investment in both education and in research and development, a firm basis for accelerating economic growth will have been established.

These investments in intangibles are particularly important in ceive the most. The production of this day and age. The world is agricultural surpluses adds undergoing a series of rapid and marked changes. The emergence of new nations in Africa and Asia, the forming of new economic groups in Western Europe, the rising Communist menace throughout the world, all attest to the fact that these changing times are demanding some change in our attitudes and actions so that we may better organize and gird ourselves to cope with current and potential circumstances.

Foolhardy to Waste Our Resources

As has heretofore been suggested, the Communist threat particularly demands that we use all of our resources and potential. At this juncture of the Cold War, it is both criminal and foolhardy to waste our manpower resources by not affording sufficient opportunities for capable and bright young people who desire to go to college or vocational school but find themselves financially unable to We canont afford to let talented young people waste their lives at inferior jobs just because they were financially unable to develop their talents to the full. This, then, raises the question Neither can we afford to waste capacity in a free market. the talents of our Negro citizens what causes by denying them equal education and job opportunities.

Increased public spending is not necessarily the right or only approach to this problem. Nor, I daresay, is lasting insistence and dous surpluses are piled up in reliance on solely private aid and government warehouses. The cost effort. Our imaginations cannot of storage for surplus wheat be so short that we shall fail to alone amounts to over \$1,000,000 develop some varied organiza- a day. But this does not mean necessarily that the increased spending must be at the Federal level. Federal spending should be limited not only to those functions which have a true national charand that is, capital spending for acter but limited to those that tangible new, modernized and ex- cannot be performed efficiently panded plant and equipment. Sec-ond, there are expenditures for or economically by private enterintangible services which are just prise or by state and local gov-

Urges Ending Wasteful Spending

While it is important to increase spending in areas which are conducive to growth, it is in some ways more important to eliminate non-essential spending in areas which are not conducive to growth. Particularly illustrative of the type of public spending that should be eliminated is the whole area of spending that wastes resources to serve the interests of minority pressure groups at the expense of the general welfare. We simply cannot continue such profligacy. in mind here such wasteful spending by the Federal Government as expenditures for farm subsidies and price supports and for excessive non-war related veterans payments.

Badly needed public services are denied to the country because of the excesses of farm politics, public works, and aid to veterans that has nothing to do with their services as veterans. The point that matters is that with fiscal resources strained, it is difficult ot obtain, except through elimination of political wastes in existing services, the contribution that creasing the amount of investment several useful new public services we can't get the benefit of such investment of the kind which em- and trying, naively, to pay for bodies technological and organi- new services through deficits

> As one concrete example, let us consider for a moment our Federal agricultural program. Under this program we tax the general public for the benefit of a small minority who are engaged in farming. In many cases those farmers who need the least reagricultural surpluses adds nothing to the general welfare and even subtracts from general well-being by wasting resources that might otherwise have been used constructively.

We at The Equitable like to think we know something about agriculture. The Equitable has been financing farmers for half a century. During all this long period we have maintained our enthusiasm for farmers and for agriculture as a desirable area for safe long-term investment.

Holds Agriculture Is Not an **Ailing Industry**

Today The Equitable has over \$400 million invested in mortgages secured by farm real esstate and is actively seeking more. We reject emphatically the notion that agriculture is an ailing industry that requires continuing Federal subsidies for its survival. Quite the contrary is true. American agriculture is by far the most efficient and progressive in the world. What it needs is to be freed of shackles imposed by a benevolent government and to be permitted to operate to its full

A Russian agricultural worker produces only a subsistence diet for six other Russians. In contrast, each American farm worker produces food and fiber sufficient for 25 other Americans, Tremenand allies.

To better understand the farm problem it is necessary to examine its parts. We have about 4½ million farm families living on the land. About a million of them are on farms that are too small and too ill-equipped for successful competition under modern technology. Another million are also on small and inefficient farms but this group has the advantage of some outside employment on a part-time basis. The remaining 2½ million families represent America's solid,

mal nutrition and irrigation.

The percentage of the population of crops for which there is suits that stimulate growth. no market — yes, and for which age space.

Four-fifths of all agriculture income is from unsupported and unregulated production and in these areas there are relatively few problems. Only in the socalled basic commodities do we have government interference and surplus problems. The dead that overhangs the market must be removed so as to restore flexibility of prices.

Offers a Gradual Farm Program

It is not recommended that the farm program should be abolished in one fell swoop. Rather, I would recommend that price supports be retained during a transition period but geared to market prices in recent years rather than to an antiquated 1910-14 parity concept. They should serve cause the consumer has, of his management of the public debt. as stop-loss floors, not as profit own volition, decided not to spend incentives. All efforts to control some of his money. There is no future for our counindividual thrift, sound fixed debt obligations, efficient savings institutions and confidence in the dollar. I am proud to say that the life insurance companies are excellent thrift institutions. They provide protection and security for American families. And they are growth-oriented in the sense savings into productive investment and thereby aid in America's growth. I am also proud of the fact that The Equitable is one of the industry's leaders both in size, in its efforts to encourage individual savings, and in its direction of these savings into productive enterprise throughout the land.

The success of our free enterprise system depends upon continuing growth while at the same time maintaining a reasonably stable price level. The maintenance of price stability is essential not be sound and consequently will be both irregular and not

Winfield Riefler, formerly Assistant to the Chairman of the Federal Reserve Board, recently

"Inflation is the enemy of growth, particularly when there is public expectation that the purchasing power of money will continue to decline. Inflation impairs growth:

(1) Because it increases instability - high level of activity cannot be sustained for long when inflation is expected to prevail;

(2) Because it fosters the misallocation of capital and impairs the quality of the managerial and investment decisions on which growth is based;

(3) Because it distorts the saving - investment process and encourages overspeculation; and

(4) Because it undermines the country's position in international

Rejects Inflation to Spur Growth

We also reject the contention that inflation is necessary to stimulate growth. Investment is the key to growth — investment within a framework of sound fiscal and monetary policy. We certainly are in a sorry state if it is generally believed that it is safer to speculate than to save! We believe the Federal budget should be balanced over the business cycle; the independence of the Federal Reserve Board should not be impaired, interest rates should be permitted to fluctuate freely, savings—savings accumulated be- should be given a free hand in the

Southwestern Public Service, with the sale of \$10 million bonds to Panhandle, Texas South Plains and New Mexico Pecos Valley. Amarillo and Lubbock, Texas, and Roswell, New Mexico, are the principal cities served. Industry in the area includes oil and gas producing (petroleum being an important factor), potash mining, food processing, chemicals, carbon black, etc. Originally the region was agricultural, and cattle, cotton, and grain are still important, with substantial irrigated acre-

The company's electric revenues are about 32% residential and rural, 22% commercial, 31% inall been sold or liquidated with one exception, making the business virtually all-electric.

Southwestern Public Service is typical "growth utility." During the decade ending Aug. 31, 1959 revenues gained 183%, plant account 187%, kwh sales 214%, capability 204% and share earnings. 13.3%. Rainfall in the area averaged about normal; but temperatures were slightly below normal which retarded irrigation and air conditioning sales, although they were well above the previous year. Construction activity conbuilding permits in the 16 prinfour installations served by the Company, and it was estimated that during fiscal 1960 some \$25,-000,000 would be spent on installations at these bases.

For the fiscal year just ended yet available but in the 12 months over 10% and earnings for comthe heavy rainfall and the cool weather which prevailed during this period, kwh consumption in the irrigated sections declined increased residential, commercial, ings ratio is 24.3. and industrial sales. In June and July rainfall over the entire service area was the heaviest on rec- Legion Wall St. ord, averaging 11.2 inches in the 20 largest cities served. This above - average rainfall assured year both in the dry land farming and irrigated areas.

926,000 kw. Peak load was 771,-200 kw in 1959 and was expected to reach 831,000 kw in 1960. Conmated \$17 million in fiscal 1959 and about \$19 million in fiscal 1960; they are expected to average about \$20 million per annum over the next four or five years.

financing has been handled pri- and Nassau Streets. vately with institutions. Last November the company negotiated

revenues of over \$51 million, suptwo insurance companies and later plies electricity to a population arranged the sale of \$5 million estimated at 831,000 in adjacent preferred stock to four insurance areas of the Texas and Oklahoma companies, bank loans being retired with the new funds. In earlier years of the postwar period common stock was sold early in each calendar year but since 1954 less equity financing has been done. Common was last sold in 1957 and no further sale is anticipated until fiscal 1962 when stock may be issued on a 1-for-20 rights basis, it is forecast.

The company is optimistic regarding continued growth. Residential and commercial sales promotion programs produced good results in fiscal 1959, with sales of electric ranges, clothes dryers, water heaters, and dishwashers dustrial and 15% wholesale. It exceeding the previous year by originally inherited from prede- more than 7%. Sales of commercessor companies some gas, water cial cooking equipment exceeded and ice properties but these have 1958 sales by 29%, with the com-1958 sales by 29%, with the company having the third best sales record for companies of comparable size in the United States. It is pushing the construction of Medallion Homes and has some 300 heat pumps in its area despite the competition with gas.

The company is earning about 6.2% on net property, the rate of 137%. Revenues increased 11% in return having improved from fiscal 1959 and kwh sales were up 5.3% in 1954. It has recently 13.3%. Rainfall in the area averadopted liberalized depreciation but tax savings are normalized.

Despite the company's rapid growth share earnings had a rather mediocre record of gains during the years 1949-54 but in the past five years earnings have tinued at a record level, with shown an average gain of 7%. Fiscal 1960 earnings are expected cipal cities served increasing to approximate \$1.15 compared about 46% compared with the with 99¢ in fiscal 1959 (after adprevious 12 months period. Ex- justment for the 2-for-1 split pansion programs were announced earlier this year). Earnings for by the Air Force for each of its 1964 have been forecast at about \$1.55, indicating an annual rate of gain of nearly 8% per annum.

Dividend payout is expected to continue around 70%. The dividend rate was increased for the 15th time in 18 years last March (Aug. 31, 1960) final data are not and another increase in fiscal 1961 would seem warranted by the curended June 30 revenues gained rent rise in earnings. About 19% of common stock dividends in fismon stock were up 17%. With cal 1959 were non - taxable and about 11% is estimated for fiscal 1960.

At the recent price around 28, the 84¢ dividend rate affords a slightly; however, the drop in ir- yield of 3%. Based on estimated rigation revenues was offset by earnings of \$1.15 the price-earnyield of 3%. Based on estimated

probability of a price increase or steel strike threat.

Inroads of other materials, long talked about in metalworking, are showing significant results.

Warehouses are fighting for business and have not stepped up their own mill buying to any great

This Week's Steel Output Based On 52.7% of Jan. 1, 1960 Capacity

The American Iron and Steel Institute announced that the operating rate of the steel companies will average *93.6% of steel capacity for the week, beginning Sept. 12, equivalent to 1,503,-000 tons of ingot and steel castings (based on average weekly production of 1947-49). These figures compared with the actual levels of *87.2% and 1,401,000 tons in the week beginning Sept. 5.

Actual output for last week beginning Sept. 5, 1960 was equal to 49.2% of the utilization of the Jan. 1, 1960 annual capacity of 148,570,970 net tons. Estimated percentage for this week's forecast based on that capacity is

A month ago the operating rate (based on 1947-49 weekly production) was *97% and production 1,558,000 tons. A year ago the actual weekly production was placed at 356,000 tons, or *22.2%. At that time the industry was virtually closed down due to a strike of the steel union.

*Index of production is based on aver-ge weekly production for 1947-49.

Auto Industry Turned Out 6,011,688 1960 Models—A 3-Year High Exceeding 5,568,046 in 1959 and 4,260,039 in 1958

Dodge posted its highest production count in 10 years in the 1960 model run, Ward's Automotive Reports said.

Ward's said the Dodge Dart comprised 87.8% or 306,603 units of the 1960 Dodge total of 349,120.

All told, Chrysler Corp. amassed 27.1% improvement over the 1959 run, recording the largest percentage gain among U.S. auto makers. Chrysler Corp. built 894,-149 cars in 1960 compared with 703,744 in 1959.

Over-all, the auto industry turned out 6,011,688 1960 models -a three-year high - exceeding 5,568,046 in 1959 and 4,260,039 in 1958 model years, Ward's said.

The six compact cars accounted for 26.2% (1,574,468) of the 1960 industry total contrasted with 9.1% (505,748) in 1959 when only two compact makes were in the

Even with one less working day because of the Labor Day holiday, Ward's said car production in the week ended Sept. 10 climbed 7.3% over the previous week.

U. S. manufacturers built an estimated 55,119 cars compared with 51,390 last week and 24,364 comparable 1959 week.

Most plants worked four days. Only exceptions were the Ford Motor Co. compact car plants which operated Saturday, Sept. 10. Mercury's Wayne, Michigan plant wound up 1960 model production Sept. 6, Thunderbird concluded 1960 car operations at Wixom, Mich., on Sept. 9.

Meanwhile, inventories of new cars in dealers' hands and in transit dropped to 887,800 units on Sept. 1, Ward's said. The drop in new car stocks was 8.3% under the Aug. 20 level of 968,800 and 16.4% below the Aug. 1 stockpile of 1,062,000 units.

Freight Car Loadings for Sept. 3 Week Totaled 577,090 Cars or 5.3% Above Same 1959 Week

the week ended Sept. 3, 1960, duction of reporting mills was picked up at the end of the week totaled 577,090 cars, the Associa- 0.5% below; shipments were 5.8% helping prices rise moderately tion of American Railroads an- below; new orders were 8.7% be- from a week earlier. nounced. There were 10,774 cars reported loaded with one or more revenue highway trailers (piggyback) in toll of 209 in 1939. the week ended Aug. 27, 1960 (which were included in that week's over-all total). This was an increase of 2,131 cars or 24.7% above the corresponding week of 1959 and 4,928 cars or 84.3% above the 1958 week.

Cumulative piggyback loadings for the first 34 weeks of 1960 totaled 359,288 for an increase of 93,429 cars or 35.1% above the 191,410 cars or 114.0% above the corresponding period in 1958. There were 55 class I U. S. railroad systems originating this type traffic in the current week compared with 50 one year ago and 40 in the corresponding week of

Intercity Truck Tonnage Was 0.4% Ahead of Corresponding Week of 1959

Intercity truck tonnage in the week ended Sept. 3, was fractionally ahead-or 0.4%-of the volume in the corresponding week of 1959, the American Trucking Associations, Inc., announced. Truck tonnage was 6.8% more than that of the previous week of this year.

Several factors seemed to contribute to the improved tonnage reports for the week. Data from past years indicate that about half of the week-to-week gain can be attributed to seasonal factors. A number of eastern terminals were moving freight not normally handled due to the strike on the Pennsylvania Railroad systemthe effect of this varied considerably among carriers.

These findings are based on the weekly survey of 34 metropolitan areas conducted by the ATA Re- week in the general commodity flects tonnage handled at more than 400 truck terminals of com-

Electric Output 8.4% Above 1959 Week

The amount of electric energy and power industry for the week ended Saturday, Sept. 10, was estimated at 14,216,000,000 kwh., according to the Edison Electric Institute. Output was 725,000,000 kwh. below that of the previous week's total of 14,941,000,000 kwh. but showed a gain of 1,107,000,000 kwh., or 8.4% above that of the

Lumber Shipments for Week Ended Sept. 3rd Were 1.8% **Below Production**

Lumber shipments of 443 mills reporting to the National Lumber Trade Barometer were 1.8% below production during the week ended Sept. 3, 1960. In the same week, new orders of these mills were 7.5% below production. Unfilled orders of reporting mills amounted to 29% of gross stocks. For reporting softwood mills, unfilled orders were equivalent to 15 days' production at the current rate, and gross stocks were equivalent to 51 days' production.

For the year-to-date, shipments of reporting identical mills were ened up somewhat and prices 3.1% below production; new or-

Loading of revenue freight for week ended Aug. 27, 1960, pro- dull trading. Volume in cocoa 29,284 cars or 5.3% above the sponding week in 1959, production trading during the week and gress Street.

All of the week's downturn centered in failures involving liabilities of \$5,000 or more, which fell to 246 from 267 in the previous week but remained considerably above the 188 of this size a ago period. rear ago. In contrast, small casualties with liabilities under \$5,000 edged up to 30 from 21. Thirtyfive of the concerns failing during the week had liabilities in excess corresponding period of 1959, and of \$100,000, up from 33 in the preceding week.

Wholesale Food Price Index Returns to 1960 High

The Wholesale Food Price Index, compiled by Dun & Bradstreet, Inc., rose to \$5.98 on Sept. 6, the 1960 high, first hit on April 19, and then again on Aug. 2 and Aug. 9. During the week the index sales of new passenger cars recompared with \$5.90 a week ear- mained close to last year, volume of 1.4%, and it was unchanged noticeably. from the corresponding date a year ago.

Higher in wholsesale cost this week were wheat, rye, oats, butter, cheese, coffee, tea, cocoa, eggs, potatoes, rice, steers, and hogs. On the down side were corn, barley, and lard.

The Dun & Bradstreet, Inc. Wholesale Food Price Index represents the sum total of the price per pound of 31 raw foodstuffs and meats in general use. It is chief function is to show the general trend of food prices at the wholesale level.

Wholesale Commodity Price Index

Advances in Latest Week There was a moderate rise this search Department. The report re- price level, with higher prices on mon carriers of general freight clines on rubber and tin. The throughout the country.

Daily Wholesale Commodity Price Index, compiled by Dun & Bradstreet, Inc., stood at 267.45 (1930-32=100) on Sept. 12, compared with 266.59 a week earlier and distributed by the electric light 277.90 on the corresponding date a year earlier.

Good domestic and export buying helped wheat prices advance Rye prices rose appreciably as purchases moved up noticeably nigner, arrivais corn in Chicago were limited. Although transactions in oats were sluggish, prices edged up fractionally in line with corn. Expectations of some crop damage moderately encouraged trading in soybeans and prices rose appreciably.

Wholesale purchases of flour lagged during the week, but prices remained unchanged from the prior period, export volume in flour was sluggish. A noticeable pickup occurred in rice harvesting, trading moved up, but prices dipped somewhat. There was more strength in export markets, especially the Far East.

Supplies at sugar markets tightmoved slightly higher; sugar tradders were 5.9% below production. ing was steady. Coffee prices

Most useful in Mid America

Corporate officers and executives listed in Dun and Bradstreet's "Million Dollar Directory" say the Chicago Tribune is the Chicago newspaper most important and useful to them. Hundreds of thousands more midwesterners read the Tribune than read any other newspaper. Put the Tribune to work for you. Advertise your securities and services in the Tribune regularly. Your Tribune representative will be glad to give you details.

Underwriter-Lee Higginson Corp. of New York City.

THE STATE OF GRADE THE STATE OF

THE SECURITY I LIKE BEST...

Continued from page 2 key steps in putting up such a building include:

(1) Selecting a prime site. building for the site.

(3) Constructing the building with strict attention to cost. (4) Renting the space to high

credit-rated tenants on long-term

(5) Obtaining favorable mortgage financing.

The Uris organization has shown itself expert in all these phases of operations. It has had the ability to foresee the development of new areas and to choose prime sites for its buildings. Because of its experience, it has been able to build its structures at costs generally below its competitors' costs. Space in the Uris buildings has been rented primarily to AAA tenants under long-term leases running from 10 to 30 years. The result has been quality office buildings with high appraisal values and assured long-term income.

This assured long-term income, guaranteed in effect by leases to AAA tenants, is particularly important. Such assured income was not possible in real estate 30 years ago, when the longest leases on office space ran for only three to of about \$51 million. five years. Now, however, it is income puts such real estate in- the future of the corporation. vestment in an entirely different which have only short-term leases.

(1) Selecting a prime site.
(2) Designing the best possible inding for the site.
(3) Constructing the building projects of tremendous importance. Rockefeller Center, Inc. has joined with Uris Buildings Corporation to form a new corporate partnership to erect a 42-story office building and a 38-story luxury hotel on two prime sites on the Avenue of the Americas, pre-viously acquired by the Uris viously acquired by the Uris Buildings Corporation. These two buildings will be close to Rockefeller Center in a rapidly developing area which appears certain to be one of the major centers of New York real estate expansion over the next few years.

Permanent financing for both of the new structures has already been arranged. The Prudential Insurance Company of America will finance the office building, and the New York Life Insurance Company will finance the hotel. When completed in June 1962, the office building will have an appraised value estimated at \$54 million; and the hotel, which is to be completed in the Spring of 1963, will have an appraised value

WASHINGTON AND YOU

BEHIND-THE-SCENES INTERPRETATIONS FROM THE NATION'S CAPITAL

WASHINGTON, D. C.-Labor is mobilizing its forces for the greatest participation in politics this fall of any time since it became a power on the American scene.

Labor, with 13,000,000 persons belonging to unions, is going to have a strong voice not only in local and State politics, but in the outcome of the Presidency of the United States.

At this very moment labor has underway an intensive drive to get trade union members, their families and neighbors registered and eligible to vote. The program is being financed by a 5-cent-a-member contribution by affiliated unions of the AFL-CIO.

Because of the all-out efforts being undertaken by organized labor, the chances of Senator John F. Kennedy being the next President of the United States are improved. Labor is backing the Massachusetts Senator.

As nearly everyone knows there is a small percentage of labor that is corrupt, but this number has hurt the organized movement with many people who do not belong to unions. When the McClellan Committee was conducting its searching into some of the corrupt and horrible practices of some crooks that had infiltrated into the union labor movement, 343 of the 1.525 witnesses before the McClellan Committee took the Fifth Amendment.

Senator John J. McClellan of Arkansas and his committee colleagues, and the committee's chief counsel, Robert F. Kennedy, brother of the Democratic presidential nominee, heard these 343 witnesses declare, "I refuse to answer on the grounds that a truthful answer might tend to incriminate me." One of the worst of the characters was Jimmy Hoffa, head of the Teamsters' Union, who was shown up as having all kinds of gangster connections.

"Not Typical"

But Hoffa is not typical of the Union movement. But the top drawer leaders of the AFL-CIO like President George Meany and Vice President Walter P. Reuther are all out to elect Senator Kennedy, members of Congress, state and local officials, particularly members of the various state legislatures, who are friendly to the aims and ideals of unions and union

Labor is greatly disappointed in the 86th Congress. On paper this Congress, which recently ended its special session, was supposed to be the friendliest of all toward labor. And it might have been except for the crookedness and corruption exposed by the McClellan Committee via the gangsters and racketeers that had infiltrated into a segment of the movement during the two years of intermittent hearings.

A survey by the Congressional Quarterly of action on 76 major AFL-CIO legislative proposals affecting unions and working people directly, showed that only seven of these proposals were passed by Congress and sent to President Eisenhower to sign. Two of these were vetoed. Labor On the March

The biggest blow of all since the late Senator Robert A. Taft of Ohio steered the Taft-Hartley law to passage in the 1947 Republican controlled Congress, came with the enactment of the Landrum-Griffin bill of 1959.

The second b i g g e s t setback involving labor legislation was the failure of Congress, controlled by the Democrats almost two-to-one, to pass the Kennedy labor bill which would have raised the minimum hourly wage across the country to \$1.25, and would have extended coverage to an additional 5,000,000 workers, like department store clerks.

But labor is out to recoup some of its lost prestige and is willing and plans to spend huge sums of money in nearly every State and nationally. The biggest door bell ringing and knocking campaign this country has ever known is going to be done before the first heavy frost falls in many parts of the country.

Among other things Labor leaders are extremely anxious to get Congress to pass in the 8th Congress a Federal law that would nullify all state right-towork laws. Power breeds power is an old, but true saying as far as some of the labor bosses are concerned. These bosses are seeking special privilege and special legislation for immunity, according to some members of Congress who are not afraid to stand up and talk back in no uncertain terms to the Reuthers, Meanys, McDonalds, Hoffas, etc.

Laws in 19 States

Just as every man in the United States is privileged to worship as he pleases in our country, so should it be the privilege of every individual to join unions or not to belong to unions.

There are 19 states that have right-to-work laws. In other words, in these states it is not compulsory that a person has to belong to a union as a condition to earning a living. These States are Alabama, Arizona, Arkansas, Florida, Georgia, Indiana, Iowa, Kansas, Mississippi, Nebraska, Nevada, North Carolina, North Dakota, South Carolina, South Dakota, Tennessee, Texas, Utah and Virginia. (Louisiana has a law applying only to agriculture workers).

Eight states have amended their constitutions to protect their laws from future legislatures, who might hurriedly pass repealer laws. By putting the right-to-work measure in the state constitution, the people would have a chance to vote on any repealer proposal that might come up in the future.

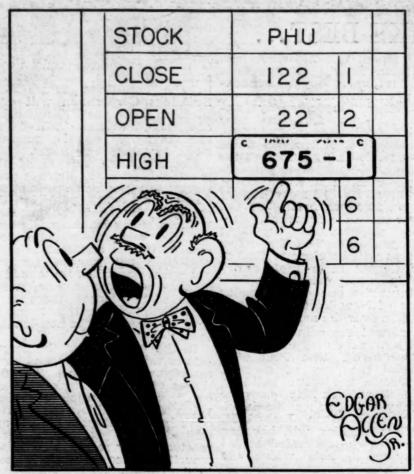

Senator Harry F. Byrd of Virginia, in the closing days of the dog-days sessions rose to warn his Senate colleagues that the 1960 Democratic platform adopted at Los Angeles in July a plank that makes the direct and unequivocal pledge:

"We will repeal the authorization for right-to-work laws, limitations on the right to strike, to picket peacefully, and to tell the public the facts of a labor dispute, and other antilabor features of the Taft-Hartley Act and the 1959 (Landrum-Griffin) Act."

Byrd's Position

The fact that the labor chieftains got the Democratic party to make such a pledge to repeal the authorization to the states for right-to-work laws, shows the power that labor holds over the Democratic party.

This would be bad for the country. Most fair-minded persons probably would concur in this statement. As Senator Byrd

"Who's the comedian who put this automobile license plate up here?"

massive victory for the big name labor bosses.

The distinguished Virginian, who has refused to endorse the Democratic ticket thus far, told his colleagues: "This is an appropriate time for me to say I shall oppose repeal of authorization for right-to-work laws with all my strength and ability.

"I regard the right to work as I do the right to life, liberty and the pursuit of happiness. It is the right, the responsibility, and the duty of the States to protect this fundamental freedom.

"The effect of this pledge would be national recognition of union membership as a condition of getting and holding a job, and to destroy State laws and constitutional provisions standing in the way."

Incidentally, there is nothing in the laws of these States with right-to-work laws that prohibits or impedes collective bargaining. Nor is there anything in those laws that forbids union affiliation. As the senior Senator from the Old Dominion State pointed out, the laws of these states protect the privilege of union membership for those who wish to join.

"The effect of the Democratic platform pledge taken in Los Angeles," said Senator Byrd, "would be to destroy two great principles on which this nation is founded - individual liberty and States rights.'

said: fulfillment would be a New World Bank **Directory Issued**

Reflecting a high level of business activity and the resulting heavy demand for funds, loans outstanding at U. S. banks jumped \$12.6 billion between June, 1959, and June, 1960, to a record \$143.2 billion. So reports the Final 1960 Edition of the Rand McNally International Bankers Directory (the 169th edition since 1872).

Total deposits, however, rose only \$3.6 billion during the 12-month period to \$252.4 billion. To obtain funds to make loans, therefore, the nation's banks reduced their holdings of U.S. Government securities by \$69 billion to \$61.8 billion, lowest level in the postwar era.

As a net result of these and other developments, total U. S. banking resources increased \$6.5 billion to a whopping \$284.1 billion. The bankers' Blue Book also reports that at midyear there were 14,058 banks and 10,488 bank Oct. 28-30, 1960 (Hot Springs, Va.) branches in the U.S. That was Southeastern Group of Invest-590 more branches. While a substantial number of new banks were opened during the period, this was more than offset by the continuing merger trend.
